I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Maureen Newman

Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Louise Riden

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Lesa Madru

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Marty Montana

Subject: [EXTERNAL]Stop the Data Center in Citrus County

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Kimberly Loree

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Julie Jacobson

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Catherine Harrell

Subject: [EXTERNAL]Stop the Data Center in Citrus County

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Mary Hansbury

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Cole Hamlin

Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Carlos Guevara

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

Subject: [EXTERNAL]Stop the Data Center in Citrus County

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Tabitha Ellis

Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Alan Dignan

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Melinda Cusack

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Sevin Conway

Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Haley Bakee

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Marilyn Beltran

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Bernard Berauer

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00012, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Deandra Allen

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Jody Burns

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Julie Pollard

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Sarah Grier

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Vicki Brown

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Sara Wigge

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Kerri Jordan

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Matthew Smith

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Frank Gray

At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Jessica Williams

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Jennifer Sincleir

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, June Hattel

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Cheryl McGinley

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Sheila Brannon

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Melissa Felts

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Stanley Larrabee

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Jozefa Kondratko

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Joshua Plum

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Ginger Washburn

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data

centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Deanna Marino

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data

centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Leslie Blanche

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Chandler Brown

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Nicoke Weaver

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Amanda Muhs

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Michael Freeman

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Emily Robbins

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Pamela Myhree

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Ellen Laul

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Kathleen Shea

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Mary G

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Ben Bunn

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Bethany Born

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Mary G

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Ben Bunn

Subject: [EXTERNAL]Stop the Data Center in Citrus County

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Bethany Born

At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Tiffany Grabowski

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Linda Petrie

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Nancy Mills

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Debbie Gardner

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Robyn Burlingame

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Jill Ellis

Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Jill Wolfe

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Audriena Sapp

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Dreama Blount

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Taylor Touchton

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Diane Julian
