To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Amy Amdahl

Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Michael Ashley

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Sally Rodriguez

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, John Faulkner

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Anastasia zavieria Dimaggassinni

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Ann Hall

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Jessica Russell

Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Lisa Haas

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Ryan James

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Danielle Swope

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Kristen Haeseker

[EXTERNAL]Regarding: The Deltona application to rezone the Holder Industrial Park & 800 acres on Hwy 41 across from it at June 18, 2026 mtg

From Cheri Clark <cheri1449@gmail.com>

Date Fri 5/29/2026 5:06 PM

To comments <comments@citruscounty.gov>; Joanna L. Coutu <Joanna.Coutu@citrusbocc.com>; landdevelopment@citrusbocc.com <landdevelopment@citrusbocc.com>; Steve L. Howard <steve.howard@citruscounty.gov>

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

I have lived for 40 years on my 5 acres directly behind the current 550 acre Holder Industrial Park on Hwy 41 which is currently zoned for light industrial, manufacturing and general commercial use (ex: Mike Scott Plumbing). Right now certain heavy or nuisance causing industries such as refineries, gun ranges are legally prohibited.

While everyone has been focusing on the Data Center I am equally concerned about rezoning that 550 acre industrial park(along with the 800 acres across Hwy 41) to Heavy Industry. If the current industrial park gets rezoned to heavy industry all the people on my street along with the Central Ridge District Park and all of the Holder residents could be exposed to major heavy industry.

* Energy & Power
* Chemical & Petroleum, oil refineries etc
* Manufacturing & production
* Waste & recycling

just to name a few.

Some of the same issues apply to that rezoning as apply to the Data Center. Infrastructure... water, electric, roads, our health. Every resident & business in Holder has a well & septic. And the electric grid would never be enough to accommodate heavy industry. Not to mention what would happen to our property values.

Please vote NO to the rezoning of the 1300 acre application by Deltona to Heavy Industry. Holder is just not ready for that type of industry.

Thank you
Cheri Clark

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

Dear Citrus County Commissioners,

My name is Dick Cook, and I am a Citrus County resident living at 3044 E May St. I am writing to state clearly and unequivocally that I am completely opposed to this data center project.

While I thank the Board for passing the data center moratorium, this was only a first step. I urge you to listen to the community, reject the application to rezone 813 acres of rural land to Heavy Industrial, and establish strict guardrails for the existing 557-acre industrial footprint.

Merging these two different types of land into a single mega-campus will permanently alter Holder. The 813-acre expansion must remain rural. Granting an industrial designation here brings a massive tech footprint within 100 feet of residential property lines. If approved, that heavy industrial tag remains on the land forever. I urge you to deny this expansion based on its complete incompatibility with our neighborhood.

For whatever infrastructure is built on the grandfathered 557 acres, the county must mandate strict operational guardrails:

1. Noise Limits: I support the proposed limits of 55 decibels during the day and 45 decibels at night measured at the property line. The ordinance must ban continuous low-frequency tones and require enclosed acoustic structures around all cooling infrastructure.
2. Cooling: The county must completely ban evaporative consumption for data utilities and mandate 100 percent closed-loop liquid cooling systems that recycle water internally.

3. No Subsidies: Citrus County must ensure that the developer covers 100 percent of their own electrical infrastructure updates upfront so regular utility bills do not increase to subsidize a private corporate power grid.

Please protect our homes, deny the 813-acre rezoning, and enforce maximum guardrails.

Sincerely,

Dick Cook

[EXTERNAL]SWFWMD board member and Why a data center or data centers are not good for Citrus

From knash812 <knash812@yahoo.com>

Date Wed 2/4/2026 7:33 AM

To Holly L. Davis <holly.davis@citrusbocc.gov>; Diana L. Finegan <diana.finegan@citrusbocc.gov>; Jeff S. Kinnard <jeff.kinnard@citrusbocc.gov>; Janet A. Barek <janet.barek@citrusbocc.gov>; Rebecca Bays <rebecca.bays@citrusbocc.gov>

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

I wrote to you all some time ago about the need for someone from Citrus County to be on the SWFWMD Governing Board. It has been 23 years. Surely, we deserve a spot on the board.

Just as important, we deserve a board member to educate and explain to us about how and why SWFWMD decisions are made and so on. Even if all our board member could do for us is to explain how bad things are, it would be helpful.

I recognize these are political appointments and there are complications and implications to get a reasonable person on the board, but the situation is, in my opinion, intolerable and unnecessary.

Is the only alternative to have our long time representative on the board, Kelly Rice, be a LOT more engaged publicly. I don't see that.

I have communicated similar things to Ralph Massullo and J. J. Grow. So far, no response. I don't hold that against them.

Okay, I got that off my chest.

Regarding the potential for one OR MORE data centers in the county, please do not approve any zoning change that would allow this activity. I have read, with some alarm, the argument, well we can do the zoning Change and then when someone comes to actually build one we'll hold their feet to rhe fire, so to speak. That is not going to happen. Big businesses will always find ways to thwart such well meaning inclinations. You are outmatched at every point. We don't have the lawyers or the experts to stop the exploitation of our dwindling natural resources. I am aware the governor and legislature is making noises to allow local governments to have a say. But really, between the Public Service Commission and the complexities of such a behemoth undertaking we will be outflanked every time. For example.

The absurd episode of the backhoe falling into the retention pond is a tragic comedy. Literally, the permission to engage in such activity is just normal business practices. I don't think anybody in Citrus

County has a real clue as to how bad the permitting process has been compromised over the years. It is disheartening to realize these are legislature mandates. It is so sad to realize our own representatives have been approving these laws. It's just business, folks. Sheesh.

Secondly, I hope you are paying attention to the next door tragedy unfolding in Dunellon with the railroad ties.

Here's a look at an article a few days ago. If you read it, you can just see the cards are stacked in favor of not the community. I am no longer surprised at these things, but hope your attention can strengthen your resolve to do the right things when you can.

https://www.ocalagazette.com/breaking-fire-erupts-among-creosote-treated-railroad-ties-in-dunnellon-despite-partial-removal/

Just look at the obfuscation web of who is responsible. It's a CSX site, managed by someone else. But the actual railroad ties belong to a third party. Again, this is how big businesses work. So, do you really think the building of a data center or data centers involving multiple contractors, sub-contractors temporary workers, and so on is going to be something we can monitor and hold them accountable? I just don't think so. If you do, that's your call.

By the way, my daughter and her family lived only a few miles from Stanton Springs, Ga for a number of years and my son-in-law worked for United Rentals, a company that rents and maintains the massive numbers of machines needed for multi-year construction of a Facebook data center. Just one anecdote. The pouring of concrete alone took ungodly amounts of water and time. All the while, years we are talking, the poured concrete sits open to the elements, rainfall pours all over it, and produces a runoff laden with such residue before infiltraring into the ground. I can only image the number of retention ponds and other SWFWMD permits needed to accommodate just that one phase alone. And by the way, Google put in a data center right next to the original Facebook data center because, I believe, the zoning Change had already been done.

Please do not open up the door for anything like that here.

Thank you for listening. I do have some appreciation for the challenges you all face.

My regards for you and the days ahead.

Sincerely,

Ken Nash

Hello,
My name is Gordon Neuenfeldt. I live in Quail Run subdivision at1044 East Oriole court, Hernando, Florida 3442.

I strenuously object to the Holder Industrial Park expansion. I demand the board delay any vote until the States new data protection laws take effect on July 1st, 2026. Our county residents deserve the 10-mile water notification and the 5-mile residential buffer. Anything else would be a disservice to the residents.

Please protect the aquifer, our property values and our way of life. Do the right thing for our County now and for the future residents. We are the Nature Coast, not the industrial park data center coast.

Thank you

Dear Commissioners,

Please do not allow a data center to be built in Citrus county. We already have limited resources for the amount of growth in our county. We are already on water restrictions.

Data centers are massive consumers of energy and water, with global electricity usage estimated at 1.5% to 3% of the total, a figure expected to double by 2030 due to AI. Large facilities can consume up to 5 million gallons of water daily for cooling, while AI-driven demand threatens to significantly increase, rather than reduce, their environmental footprint.

Please don't destroy our beloved county.

Hello,

As a local Floridian resident! I wanted to reach out today to sincerely advocate for myself and my community. I work with many elderly people concerned about our wildlife and the overdevelopment of the area.

Most importantly today we are writing today to adamantly oppose any one interested in purchasing and developing land for AI Data Centers. As our county leaders we truly want you to educate yourself on the massive impact these stupid computer centers have on our water supply, pollutants and energy drain.

We are not for this extreme depletion of our natural habitat as well as non- renewable resources. This does not create jobs nor deserves any tax breaks or benefits! WE DO NOT WANT THESE AI DATA CENTERS COMING TO OUR AREA.

Thank you for listening and understanding this is not what your average county resident wants, plus there is LITERALLY NO benefits to AI data centers in our area! Please let us know if there is any local action or meetings we can attend to continue to PROTEST against these considered projects and developments.

Thanks,
-Haley Oosterhof

To: Thomas Osteen <tommyosteen1223@gmail.com>

Hi Thomas,
It was nice to meet you today! In the map below, I have highlighted the parcels in question, owned by Deltona Properties. The greens on the map are the Florida Wildlife Corridor - the dark green represents areas that have already been conserved, while the light green represents areas that still need to be protected. The light blue to the left is also a wildlife corridor, but a lower priority one.

Parts of the property do fall within an unprotected area of the Florida Wildlife Corridor. I will see if I can get a letter together for you following our workshop, but it will be pretty tight since the meeting is Thursday am and our workshop is all day tomorrow. I hope the map helps some!

[EXTERNAL]CPA-2025-00012 and CPA/AA-2025-00013: Opposition to Comprehensive Plan Amendment – FLUM Change to Heavy Industrial

From Samantha Osteen <samosteen1223@gmail.com>
Date Mon 2/23/2026 3:32 PM
To comments <comments@citrusbocc.com>; Jeff S. Kinnard <jeff.kinnard@citrusbocc.gov>; Diana L. Finegan <diana.finegan@citrusbocc.gov>; Janet A. Barek <janet.barek@citrusbocc.gov>; Rebecca Bays <rebecca.bays@citrusbocc.gov>; Holly L. Davis <holly.davis@citrusbocc.gov>

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Honorable Members of the Citrus County Board of County Commissioners,

I am writing in strong opposition to the proposed Comprehensive Plan amendment to change the Future Land Use Map (FLUM) designation of approximately 1,300 acres from Agricultural and Residential to IND (Heavy Industrial).

This request represents a fundamental and permanent shift in land use policy for this corridor. It is not a minor zoning adjustment. It is a redesignation to the most intense use category available under the County's Comprehensive Plan.

Lack of Defined Use Plan

Historically, this Board has required developers seeking major land use changes to present a clearly defined development plan and commit to specific uses. That practice protected residents and ensured transparency.

In this case, we are being asked to approve a Heavy Industrial designation without a defined, binding plan for what will ultimately be constructed on this land. Potential uses have been discussed, but nothing has been formally committed to or restricted.

Approving open-ended Heavy Industrial entitlements across 1,300 acres without a defined development agreement removes accountability and exposes adjacent residential communities to unknown future impacts.

If the County is to consider such a significant land use amendment, it should require a specific, enforceable site plan and use limitations tied to the approval.

Compatibility With Residential Areas

The surrounding land use pattern includes Low Density Residential, Medium Density Residential, High Density Residential, and Rural Residential designations.

Introducing Heavy Industrial directly adjacent to residential neighborhoods is incompatible with the established development pattern and inconsistent with long-standing planning principles of compatibility and orderly growth.

Inadequate Buffering and Lighting Impacts

The proposed 75-foot natural buffer is insufficient for a 1,300-acre Heavy Industrial tract.

To put this in perspective: I can see the lights from Ocala at my home, which is over 20 miles away. If large-scale industrial lighting is placed approximately two football fields from my front door, the visual and light trespass impacts will be immediate and significant.

If this amendment is not denied, I request that, at minimum:

- The natural buffer be increased to a minimum of 500 feet from all residential properties.
- The buffer should include engineered earthen berms, dense year-round vegetative screening, and professional landscape design.
- Full cut-off, downward-shielded industrial lighting be required.
- Maximum foot-candle limits at residential property lines be strictly enforced.
- Continuous monitoring and enforcement mechanisms be included in the approval.

A fence alone does not mitigate industrial intensity.

Traffic and Infrastructure Impacts

Heavy Industrial uses generate substantial truck traffic, employee traffic, and service vehicle activity.

Before any amendment is approved, the County should require:

- A comprehensive traffic impact study.
- Road capacity and level-of-service analysis.
- Clear identification of who bears the cost of required roadway improvements.

If roads must be widened or upgraded, will taxpayers bear that burden?

Water Supply and Aquifer Protection

This community relies on well water and septic systems. The region is dependent on the Floridan aquifer system.

Heavy Industrial uses raise legitimate concerns about:

- Chemical storage and handling.
- Stormwater runoff.
- Fuel storage and generator operations.
- Potential groundwater contamination risks.

The County must clearly demonstrate how aquifer protection will be ensured. What safeguards will be required to prevent contamination? What monitoring systems will be in place? Who bears liability in the event of groundwater impact?

Electrical Infrastructure and Cost

Industrial facilities, particularly data centers, require significant electrical capacity and often necessitate substations and grid upgrades.

Will electrical infrastructure expansion increase rates for residents? Who will fund necessary upgrades? What assurances exist that local residents will not subsidize industrial power demand?

Economic Claims Must Be Evaluated Carefully

Job creation is often cited in support of projects like this. However, construction jobs are temporary. Operational staffing for data centers and certain industrial facilities is often limited due to automation.

Temporary economic benefits should not justify permanent land use incompatibility and long-term impacts to established residential communities.

Conclusion

This proposed FLUM amendment would permanently alter the character and planning framework of this area.

The Board should not approve a change from Agricultural and Residential to Heavy Industrial without:

- A defined, enforceable development plan.
- Demonstrated compatibility.
- Adequate buffering.
- Comprehensive infrastructure and environmental safeguards.

- Clear economic transparency.

For these reasons, I respectfully request denial of the proposed Comprehensive Plan amendment.

If the Board is inclined to approve this request, I strongly urge the imposition of substantial buffering, lighting controls, infrastructure protections, and enforceable development limitations to protect nearby residents.

Thank you for your time and consideration.

Respectfully,

Samantha Osteen

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Laura Cop

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, ARMANDO DE RON SANTIAGO

At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Judie Banfield

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Michele Howard

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Jane Broomsmith

[EXTERNAL]Zoning Change/Holder Data Center

From Carol Koch <cpkoch@comcast.net>
Date Fri 6/5/2026 10:38 PM
To Joanna L. Coutu <joanna.coutu@citrusbocc.gov>

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

Hello,

As a resident of Citrus County (specifically Citrus Springs), I urge you to deny the zoning change for the Holder Industrial site that would enable the approval for a data center in that location. This is supposedly Florida's Nature Coast and is promoted as such for many years. Those of us who have moved here, and those who will be moving into the many, many new homes being built, chose to reside in this area for peaceful enjoyment and nature. It's proven that data centers create noise and disturbances which is bad enough, but the extreme use of water by these centers would surely create further problems with our water tables.

Many, many of us continue to urge you to DENY the zoning change and we count on you as our representatives to do what is right for our communities here.

Thank you,
Carol Koch

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Niccole Sanchez

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Denise Myhre

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Danielle Benz

As a lifelong citizen of Citrus County we must keep the Nature coast safe changes that would endanger it's natural beauty which is why I urge you to deny the zoning change for the Holder Industrial site. We cannot lose our nature coast to rapid and dangerous industrialization. Do not allow this zoning change to go through!

Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Cindy Thompson

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Tracy Westrack

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Richard Soto

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Kelly Pascale

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, aimee Spinks

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Dalton Caskey

At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Sheryl Gilbert

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Kimberly Betties

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Rogerr Morris

Ms Joanna Coutu
Planning and Development

June 9, 2026

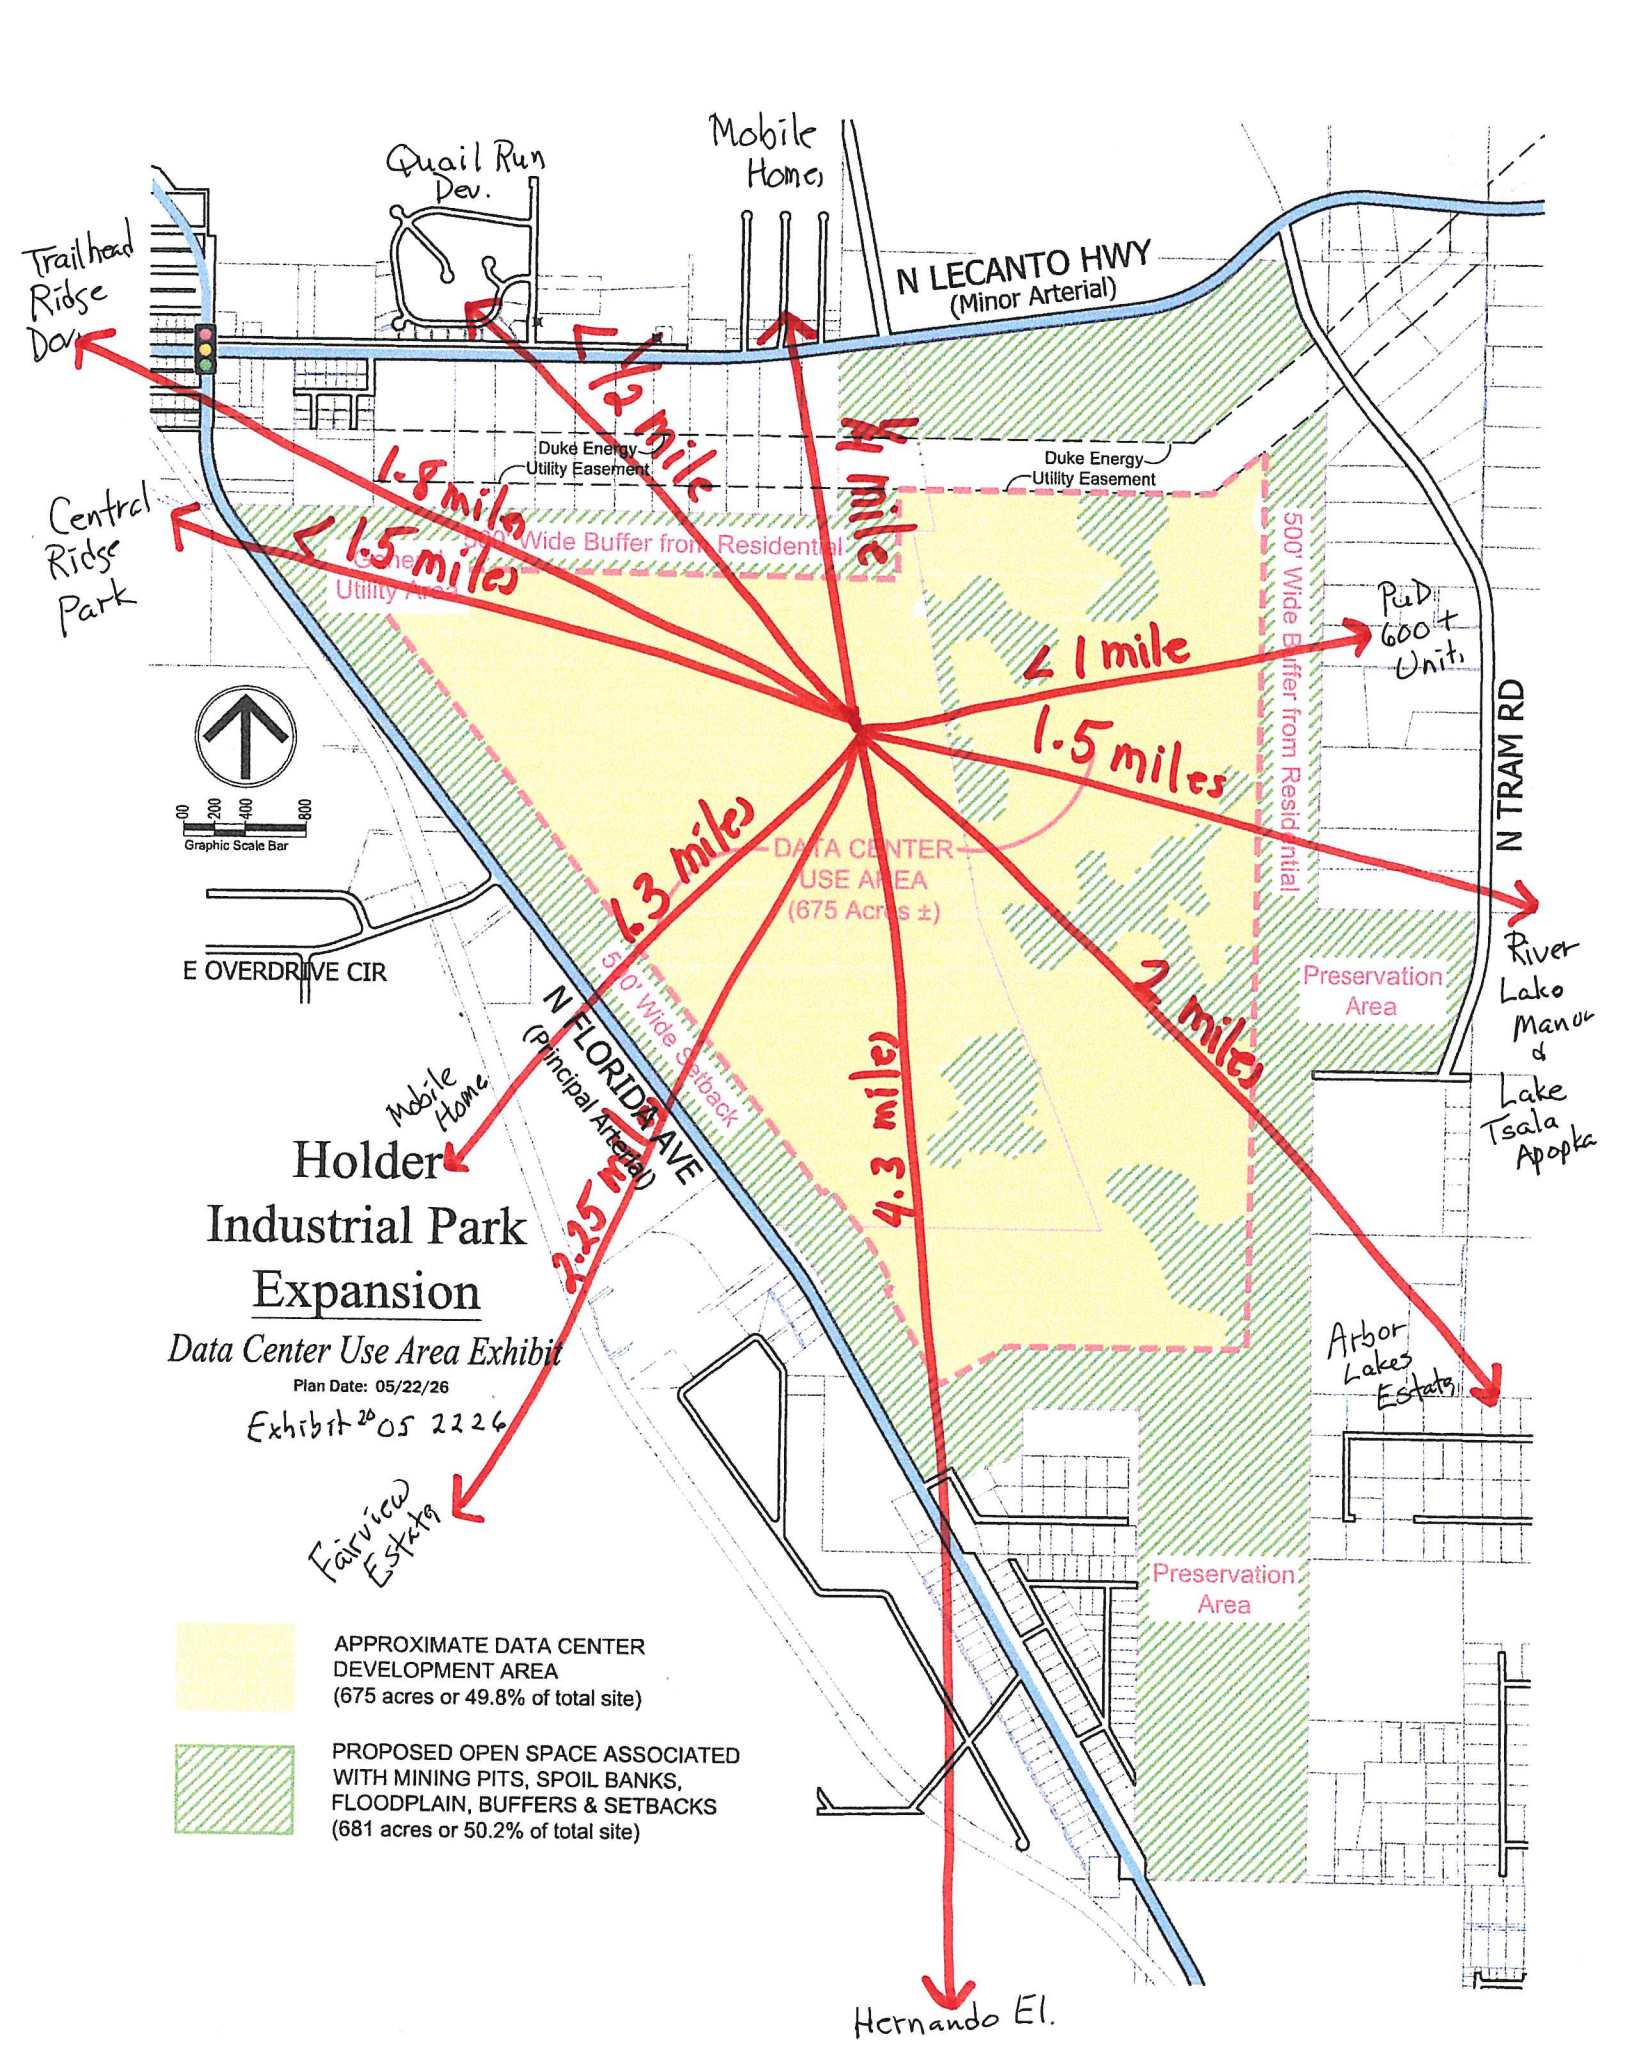
From the Citrus County Strategic Plan: Quote: "Where nature and community thrive"
From P&D Vision Statement: Quote: A welcoming, economically vibrant community where people and nature live in harmony.
From P&D Mission Statement: Quote: To manage growth and foster prosperity by prioritizing the protection of environmental assets, the development and maintenance of infrastructure, and the health, safety and well-being of its citizens.

At a previous meeting in May, Planning & Development was tasked with tweaking the Land Development Code. With minor additions and specific classifications of Light and Heavy Industrial Districts the plan was approved. Outside of the following statement absolutely no consideration was given to concerns relating to the impact on public health, property values and the impact on wildlife.

After the definitions of Light and Heavy Industrial Districts the following statement was added to the LDC: ...subject to standards that protect the nearby residential, commercial, agricultural, public uses of property, waterways, wildlife, and environmentally sensitive lands from hazards, noise, and other disturbances.

Where might these standards be found? They certainly were not listed in the LDC or the Strategic Plan. Although in your codes you have reference to "Noise Sensitive Zones" there is no statement explaining what these zones are beyond listing them as schools, nursing homes, hospitals, libraries, etc. There is nothing indicating how far from these zones Light or Heavy Industries should be located. Light Industrial development should be banned within 1-3 miles of a school, daycare center, or nursing home. Considering the noise and pollution produced by any Heavy Industry, a minimum distance of three miles, preferably more, from schools, daycare centers and nursing homes, should be established and included in any LDC and Strategic Plan. In like manner, considering the impact on the health and property values of residents, a minimum distance of 1-3 miles from Light Industrial development and at least 3 miles distance, if not more, from Heavy Industrial development to residential properties should be established. The same distance standards should be applied to sensitive watershed and conservation and wildlife areas.

Expanding development in Citrus County is increasingly converting rural, low and medium density zoned property and agricultural lands near conservation areas into paved-over plots, void of vegetation, and increasing health risks to humans and wildlife. This lack of vegetation reduces the ability to filter air, regulate temperature and sustain biodiversity, increasing health risks, devaluing nearby property and driving off wildlife.



It seems that permitting and zoning decisions are being made without any clear accounting of their public health costs and damage to the environment. Until these concerns are understood and addressed, and strict definitions of the location of both Light and Heavy Industrial Development in relation to schools, daycare centers, nursing homes, residential properties, wildlife and conservation areas are established, the LDC and a Strategic Plan are incomplete. Further permitting and zoning of these sites should be halted until these concerns are resolved. Keeping that thought in mind I am strongly requesting no zoning change for the Holder Industrial site.

Respectfully,

Karen Baldwin

Dear County Commissioners,

Please read the above article concerning the dangers of allowing a data center to be built in Citrus County. Again, I ask you to vote no to allowing the rezoning on June 18th.

Sincerely,

Amanda Stewart

Hello,

My address is 4960 N Alabaster Dr, Hernando, FL 34442. My parents were from here. I raised my kids here. We love citrus county. I am aware that development is necessary and do enjoy shopping at home rather than Tampa or Ocala as I've had to do most all my life. However when it comes to possible rezoning to heavy industry in my backyard I am against that type growth. Especially as we've heard the possibility of a hyper scale data center maybe the next project in Holder. Since becoming involved with the no rezoning and no data center campaign I've learned the negative impacts facing my small community including loss of woodlands and wildlife, risk to the aquifer, constant noise, the possibility of medical risks that aren't completely known due to the lack of long history from this type project, increased traffic with the roads already compromised, increased strain on the electrical grid possibly raising current homeowners monthly bills, also lowering the value of properties which in my case have owned since the 1980's. Another item that's recently been raised is what happens to a building of this magnitude when it's closed due to its short life expectancy. Who will be responsible for the cost of clean up after a natural disaster. What resources are in place in that regard?
Please consider the long term consequences of rezoning the holder parcel in order to stop the risk of a hyper scale data center being placed near my home.

Thank you so much for listening to the people of you neighborhood.

Sincerely,

Vicky Henigar

I don't want to be a Nerd but when you say sufficient capacity it depends. I looked at their proposed domestic water demands, and wastewater flows, and they are quite small. We currently have capacity at the plants to handle such small flows. However, when it comes to capacity in the existing pipes that depends on their specific project requirements. For example, if the Fire Marshal requires fire flows that can't be provided by the existing 6-inch water main near their project then technically we wouldn't have sufficient capacity in that portion of our existing system. This is something their engineer would typically evaluate and remedy with off-site improvements during the design process.

Subject: 6982 S. Suncoast Blvd.

Hi Layne,

Land Development has received a Planned Unit Development application for a mixed use project – multi-family and commercial – at 6982 S. Suncoast Blvd. Your letter to Simonne Hammarquist (dated March 11, 2026) provided water and wastewater maximum capacity, current maximum flow, and connection points. Would there be sufficient capacity for both water and wastewater for a project with 38 multi-family units and 6 commercial units?

Jen Perkins
Senior Planner
Citrus County Land Development Division
Citrus County Board of County Commissioners

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

Marco Wison Inverness Florida. Without going into great detail, I was a past president of the TooFar water and natural resource foundation. Needless to say, I am vehemently against data center in Florida and especially in citrus county!!!!
My understanding is the South Florida water management can not approve the water allocation on this project as it would be detrimental to water resources.
I would hope you take this into consideration when voting NO on this application.

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Ben Ellis

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Sarah Heathcoe

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Donald Roberson

At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Terry Bolles

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Marianne Mueller

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Shanice Rodriguez

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Anne Brooks

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Jamed Buffa

To:Citrus County Growth Management
Eric Landon, Director
3600 W Sovereign Path #202
Lecanto FL 34461
RE:: Application # CPA-2025-00012
Application # CPA-AA-2025-00013

Dear Mr. Landon,

I am writing to formally express my strong opposition to the proposed rezoning of the property at the Holder Industrial Park from agriculture to Heavy Industrial. As a resident and property owner within a mile of the proposed site, I believe this drastic shift in land use zoning will have severe and lasting negative impacts on our community.
While I recognize the need for economic growth and development, heavy industrial zoning is wholly incompatible with the rural, agriculture and residential character of our area. Transitioning this land for heavy industrial use threatens to irreversibly alter our environment and quality of life for the following reasons:
1. Noise, Air, and Light Pollution:

Heavy industrial activities often involve continuous, 24/7 operations, loud machinery, and bright security lighting. The resulting noise and light pollution would heavily disrupt the quiet enjoyment of surrounding agricultural and residential properties.

2. Environmental and Ecological Degradation:

Industrial use brings significant risks of stormwater runoff contamination, hazardous waste, and air quality deterioration. This poses a direct threat to our local ecosystem, soil quality, and the nearby water basins,(Our fresh drinking water comes from a well)Hernando Lake is within a very short distance away).

3. Diminished Property Values:

The introduction of a heavy industrial park directly adjacent to rural and agricultural lands will inherently depress the value of my property and other nearby real estate.

4. Traffic and Safety Hazards:

Heavy industrial operations invariably result in heavy commercial truck and trailer traffic. Our local roadways, specifically Hwy 491 and Hwy 41 and most likely Hwy 200 are not engineered to safely accommodate this volume of heavy-duty vehicles, creating significant safety risks for local drivers, pedestrians (with a walking and biking trail within a half mile away).

Responsible planning requires that zoning changes protect the existing character of the community and ensure infrastructure can support the intended use. Approving this rezoning request se3ts a dangerous precedent for the area and provides no tangible benefit to the current residents who have invested in this community.

I strongly urge the Planning and Development Board to deny this rezoning request and preserve the agricultural zoning of this property.

Thank you for your time, your public service, and for considering the voices of the residents who live here.

Sincerely,

Patsy Roof

Subject: [EXTERNAL]Data Centers. NO!

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

I've been with a group - NoDataCenterCitrus.org for months fighting against the Devastation caused by Data Centers. Has any of you actually looked into this at all? I read articles- that's multiple articles a day. BOTH SIDES! You get to realize that there are no PROS JUST AN AMAZING AMOUNT OF CONS. Do you realize that Florida is a Destination State meaning people come from all over the world spending billions of dollars on our environment not to see farms, ranches, NATURE, devastated! Where is the wildlife where will they go. In this county alone - Citrus - everything is overlooked - Development- I call it GREED. Regulations on endangered species OVERLOOKED. GREED DOESN'T CARE . Aquifer no problem it's down to 17% but there's no problem just because this area has been in a drought for more years than not ! Let's give out more permits for thousands of homes - developers, once the houses are built , won't care that the owners of the houses won't have any water NO BIG DEAL! Then this County is voting on a permit for rezoning of Holder Industrial Park with a permit in place for Deltona to come in and build a Data Center. Have you really educated yourselves on what happens to Counties that let them in ? Do you listen really listen to people that have them for neighbors? You can't get back the environment, land, animals, birds and let's not forget the revenue from TOURISTS ! You probably won't read any of this let alone a message from a person living next to one ! Realize the committee for Progress and Development will be voting on rezoning HIP this coming Thursday at 9 am. You all better be listening to the public because the hallways should be filled with them. Not everyone can attend because meetings - IMPORTANT MEETINGS - are held when the majority of of people are working! Go Figure! We can't vote out the Progress and Development Committee because they're volunteered but we will vote out all BOCC members and any other politicians that want to destroy what's left of the County! LISTEN TO THE PEOPLE ! Data Centers really aren't needed ESPECIALLY IN CITRUS COUNTY or anywhere from what I'm learning. READ ON

To: <holly.davis@citrusbocc.com>

Hello Holly,

I am writing to share a concerning experience we had while camping in our Airstream in Morgantown, WV, last month. We experienced severe nausea. We thought we had the flu! While lying down, noticed a rhythmic movement and our keys swaying continually. Our research indicated that nearby industrial parks and data centers were the likely source of this low-frequency vibration.

We were so ill that we were initially unable to leave. This experience made me realize that living near such constant vibration would be unbearable and would significantly decrease property values. More importantly, it poses a major health hazard to humans, wildlife, and pets.

I also want to note that when I posted a review of our experience to the KOA website, it was removed.

Data centers must not be allowed near residential areas or cities. I urge you to consider this carefully, as these developments will negatively impact the character and health of the Nature Coast.

Sincerely,

Joyce Schwing

- *The first was lack of sleep and that was difficult enough, but headaches started, major migraines where they would last for a day or two days or three days or four days with nausea and vomiting.*
- *I was pretty sure whatever was causing the problem, started when [number of IWTs] turbines - I don't know exactly how many kilometers south of us. I'm guessing about [distance] kilometers South. One stage started off, in fact, they were spinning around, but I thought they were freewheeling, and hadn't really started [generating], and I was getting popping in my ears. It felt like champagne bubbles going off on my eardrum, it was painful....*
- *I became so weak and ended up being hospitalized.I couldn't sleep there [at home]. I couldn't rest, I couldn't function. I couldn't work...lack of sleep... headaches...migraines...nausea and vomiting, dizzy, and vertigo, ear pain... pressure in the ear...cognitively impaired...couldn't remember things.*
- *I'll wake up in the middle of the night with my head racing, pressure in my head. My memory has been terrible. My short-term memory, when it's really bad, I have trouble making simple decisions, like what kind of cereal to buy, just simple things.*
- *My memory was just terrible and my memory is better now [after vacating the home].*
- *Unable to walk at times because I became so dizzy and vertigo, ear pain as though you were going up in an airplane, a kind of pressure in the ears, shakiness in my stomach, which at first I didn't feel at my chest, but the more and more I lost weight, it became more apparent it was in my chest as well.*
- *Dizziness...I've never had dizziness before...my sleep patterns are so disturbed...You cannot recover or regenerate when you have lack of sleep...I had so much head pressure and the tinnitus in my ears was so bad that I couldn't find a place to rest...Racing heart and startled...agitated have to get out.*
- *Terrible vertigo. Terrible. So many times I was stranded on the side of the road, I couldn't drive, I was throwing up. As soon as I get into the wind area...it hits me. I don't even have to be at home...I was pretty irritable, pretty miserable.*
- *We become very agitated and irritable and our ears will pop and we'll still get headaches and stress where your neck starts hurting and your jaw starts hurting and then you get a headache.*
- *I found it very irritable and unbearable.*
- *As I continue to be exposed, they [symptoms] continue to get worse. we need to get ourselves out of that toxic environment.*
- *Ear pains, the headaches, ringing in your ears, popping in your ears... vibration...sleep deprivation...I'd wake up, it just felt like my head was swimming... it makes me certainly very angry and irate. I think my personality even changes when I have to put up with this. I'm very, like I said, angry, isn't it?*
- *Headaches still continues for us, we're not well all of the time*
- *It makes me certainly very angry.*
- *I'd wake up with [illegible]...My heart would be racing and I would be extremely alert, almost afraid, thinking that the response is similar to my house is on fire or some somebody is stealing my car.*

As a lifelong citizen of Citrus County we must keep the Nature coast safe changes that would endanger it's natural beauty which is why I urge you to deny the zoning change for the Holder Industrial site. We cannot lose our nature coast to rapid and dangerous industrialization. Do not allow this zoning change to go through!

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

Deltona is purchasing residential lands along 491 and there has been clearing of lands at 491/200.
The original congressional record has my property and others SWFWMD never purchased in lowland areas directly adjacent to where this is occurring.
We cannot continue to allow trees to be removed from the upland areas and expect to survive massive rainfall or a flood event anywhere to east of the proposed data center site.
200 is our evacuation route. Clearing of lands in the upland areas is going to cause mass surface water runoff.
This was one of the primary reasons for the construction of the outfall canal c-331 outside of our river basins.

The river basins needed an additional way to handle water that was overflowing the Withlacoochee. We do not have a flow easement agreement with SWFWMD here, so they will be directly flooding us with any additional land clearing.
Please be wise to the purchases being made by this company.
Respectfully
Athalene Bulla

Good morning Joanna,

Attached are videos of field measurements from the properties surrounding the subject property.

As you can see, the average of these comes out to less than 15.4' which is what the proposed set back is for the subject property. I hope that this satisfies the requirements needed to have this permit approved and issued.

Addresses-
12014 W. Tarpon Ct. - 18' per permit pulled for new construction home
12030 W. Tarpon Ct.- 16.5' per video
12035 W. Tarpon Ct.- 11' per video
11994 W Riverhaven Dr. - 10' per video
12014 W. Dolphin Ct.- 18' Per video
12040 W. Dolphin Ct. -10' per video

This videos are in order from 12030 tarpon to 12040 dolphin

These measurements equate to an average set back of 13.91'. Well within the 15' maximum allowed.

Re: Applications CPA-2025-00012 and CPA/AA-2025-00013 / CPA/AA/PUD2025-00013 re: Holder Industrial Park Rezoning Request - Comment for the record

TO CITRUS PDC AND COUNTY COMMISSIONERS:

In 2019, the Planning and Development Commission and the Citrus County Commissioners approved Holder Industrial Park as "LIGHT industrial". I doubt those panels of commissioners who, at that time carefully weighed what was suitable for Citrus County would approve of a zining change to heavy industrial with potential AI hyper data center development that we are facing today.

In their final development plan, the commissioners explicitly prohibited high-impact or nuisance facilities, which included uses like: Gun ranges or Refineries. To ensure that Holder Park remained a light industrial/manufacturing hub, they also moved any heavier/noxious uses to a STRICTLY conditional basis, including:
Stockyards and slaughterhouses
Sanitary landfills
Chemical manufacturing
Mineral extraction and raw material processing .

The zoning change to light industrial required strict development conditions to buffer surrounding areas, such as a minimum 100-foot setback when adjacent to residential districts and strict screening rules for all outdoor storage.

Today, you have Deltona's request for a zoning change to heavy industrial for the purpose of the construction of an AI hyperscale data center. This in no way meets the zoning requirements already determined for the Holder location. Or does it meet the standards of

Citrus County's comprehensive plans. Residents wonder why you would even consider this expanded zoning change that threatens the well very being of our residents, wildlife, livestock and environment - this beautiful nature coast.

You must have seen the numerous reports from around the country in areas where these A1 hyper data centers have been allowed of the incredible water demands they create. If not - know this - residents in those areas are experiencing such low water pressure that they can no long shower - water only trickles out of their faucets. And the water comes out of the tap brown - now polluted. Would you want to live like that? It has been stated we only have 20% of our normal acquifer reserves and we are already at a great risk of sinkholes. Especially at a time of extreme drought in Citrus County, you would dare to risk our most precious, lifeline commodity - water and our acquifer??

And please don't rely in the recent SB 484 law passed by the state to protect residents. One needn't look hard to read the many loopholes written therein that actually provide a data center the opportunity to use our water reserves and for our utility companies to pass the burden of extra electrical demands on taxpayers.

Throughtout this great county we are seeing that AI hyperscale data centers are quality of life and natural resource vampires. Your approval would be sacrificing everything that residents have built in Citrus County for the profit of one company and its related entities and individuals. You need only listen to the goals shamelessly expressed by the current AI developers / technocrats - their intention is to create less human jobs, not more. One developer recently stated that "human labor is a tax on productivity"! That does not sound like a guarantee of hundreds of jobs fir Citrus County.

Please don't approve the rezoning of Holder Industrial Park as you will open a pandora's box of severe problems in our community that will be unfixable. If approved, there would be no turning back. And that would be YOUR legacy to residents and your own family and friends.

Thank you for listening and for your service to this great County. Please add my comment to the record. I implore you - save our county from these severe risks and don't sacrifice us for the benefit of a few.

Regards,

Julie Ardillo
Inverness, Florida

[EXTERNAL]FORMAL PUBLIC HEARINGS COMMENT FOR THE RECORD Deltona Corporation's CPA-2025-00012 and CPA/AA-2025-00013 Applications

From naive-hugest.2w@icloud.com <naive-hugest.2w@icloud.com>
Date Tue 6/9/2026 4:43 PM
To comments <comments@citruscounty.gov>

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

Distinguished Members of the Commission,

I request that the Citrus County Board of Commissioners each recommend denial of CPA-2025-00012 and CPA/AA-2025-00013, and any other applications by Deltona Corporation to rezone 800 acres in Holder Industrial Park of Lecanto to Heavy Industrial. Under Section 163.3194, Florida Statutes, all rezoning must maintain absolute consistency with the Citrus County Comprehensive Land Use Plan. This application directly violates three core mandates of that plan:

1. Incompatibility with Rural Character: The Comprehensive Land Use Plan mandates that new industrial designations preserve Citrus County's rural character. Deltona's requested Heavy Industrial overlay would insert massive structures, constant low-frequency acoustic humming, and invasive 24/7 lighting into a quiet, rural sector near U.S. 41. This high-impact utility is fundamentally incompatible with the existing residential and agricultural community.
2. Violation of Infrastructure Concurrency: The Public Facilities element dictates that adequate infrastructure must be available to support a development before land-use changes are granted. A hyperscale data center demands immense grid capacity and millions of gallons of daily water use. The county has not performed impact studies verifying our infrastructure can absorb this load, violating clear concurrency mandates.
3. Conflict with Aquifer Protection: The Conservation Element prioritizes protecting the Floridan Aquifer and groundwater resources. Hyperscale liquid-cooling systems place an unsustainable burden on our regional water supply. Diverting millions of gallons of water away from local environmental and human needs to cool private artificial intelligence grids directly undermines the county's explicit duty to protect our fragile local ecology.

Because Deltona Corporation's Comprehensive Plan Amendment application for Rezoning fails the compatibility, infrastructure, and conservation mandates of the Citrus County Comprehensive Land Use Plan, it is your legal duty to reject it. Please vote NO.

Sincerely,

Joseph Terrell
Citrus Spring, FL 34434

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Jessica Todd

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, David AuCoin

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, The Mudds

RE: Strong Opposition to the "Holder Industrial Park Expansion" / Data Center Proposal
Hearing Date: June 18, 2026

Dear Members of the Citrus County Planning and Development Commission,

I am writing as a resident of Citrus County to formally register my strong objection to the proposed **Holder Industrial Park Expansion**. Expanding this park to pave the way for a massive, heavy-industry artificial intelligence data center poses severe environmental, health, and financial risks to our local community. The burdens of this mega-center heavily outweigh any long-term automated job creation promises.

I urge the Commission to recommend a denial of this proposal based on several critical issues:

- **Violation of Water Constraints & Strict Restrictions:** Citrus County residents are already under **strict water restrictions** to preserve our vulnerable aquifers and local environment. It is entirely unacceptable to ask our citizens to ration water while simultaneously approving a massive data center complex that could demand millions of gallons of water daily for its evaporative cooling infrastructure. Permitting an industry of this scale directly undermines our county's current resource preservation efforts.
- **Incompatible Zoning Near Residential Neighborhoods:** The proposed expansion site along County Road 491 and Tram Road directly shares property lines with existing residential communities. Forcing a massive industrial footprint adjacent to quiet neighborhoods destroys our area's rural character, lowers residential property values, and strips residents of peace and privacy.
- **Unstable Grid Demands and Higher Rates:** AI data centers put unprecedented stress on electrical grids. The substantial infrastructure upgrades required to route massive

amounts of power to Holder will drive up costs. These multi-million dollar utility burdens are routinely passed on to local families and ratepayers.

- **Harmful Noise Pollution:** Data centers operate 24/7. The constant, low-frequency hum from industrial cooling towers, high-powered HVAC systems, and electrical hardware cannot be blocked by standard residential walls. This creates a severe quality-of-life issue, leading to chronic sleep disruption and elevated stress for nearby families.
- **Health and Chemical Hazards:** The array of industrial diesel backup generators required to keep this site operational will release significant particulate matter (\(PM_{2.5}\)) and nitrogen oxide (\(NO_{x}\)) emissions during routine testing and grid stress events. Furthermore, the massive quantities of specialized chemical fire suppressants stored on-site introduce dangerous PFAS "forever chemicals" right next to our communities.

The Citrus County Board of Commissioners previously placed a moratorium on future AI data centers to ensure strict municipal code guardrails could be drafted. Exempting the Holder expansion project defeats the entire purpose of that protective measure. Our infrastructure and neighborhoods are too vulnerable to absorb a mega-center of this size.

Please place this letter into the official public record for the **June 18, 2026, hearing**. I strongly urge you to represent the well-being of Citrus County constituents by voting **NO** on this destructive expansion project.

Thank you for your time and thoughtful consideration of this important decision to protect our community.

Sincerely,

Kathy A. Parker

2nd Opposition Memorandum regarding the Holder Industrial Park Expansion (HIP) applications CPA-2025-00012 and CPA-AA-2025-00013 for Public Hearing and Public Comment 06.18.2026..pdf;

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

NOTE TO STAFF: Please accept the attached 2nd Opposition Memorandum regarding the Holder Industrial Park Expansion (HIP) applications CPA-2025-00012 and CPA-AA-2025-00013 for Public Hearing and Public Comment 06/18/2026.

I, Jessica Ketner, respectfully request that this memorandum and all attachments be:

1. Entered into the official public record for these applications;
2. Made available to the citrusclerk.portal.civicclerk as public record;
3. Distributed to all Planning & Development Commission members and staff;
4. Distributed to all Board of County Commissioners members and staff; and
5. Retained as part of the official record for all future hearings and proceedings related to these applications.

Please confirm receipt and inclusion into the record and distribution to all intended parties and CC via email at keepingCCbeautiful@gmail.com

Thank you.

RE: Holder Industrial Park Expansion / Planned Service Area Expansion / Applicant: Deltona Corporation CPA-2025-00012 and CPA-AA-2025-00013 (CPA/AA/PUD2025-00013)

Applicant: Sidney F. Ansbacher / Deltona Corporation

Working Report Notice: This report is a public-record analysis based on the uploaded publicly available materials to the project. It is not legal advice and should be verified against the official agenda packets, ordinances, and final county records before public filing or oral testimony.

2ND OPPOSITION MEMORANDUM

Date prepared: June 12, 2026

by Jessica Ketner, Citrus County Resident

Grass-roots group: Protect Nature Coast Florida – Citrus County

FOR PUBLIC RECORD

A Comparative Analysis Report of *2019 Approval Baseline vs. March 5, 2026 Proposal vs. June 18, 2026 Revised Hearing Packet*

NOTE TO STAFF: Please accept the attached 2nd Opposition Memorandum regarding the Holder Industrial Park Expansion (HIP) applications CPA-2025-00012 and CPA-AA-2025-00013 for Public Hearing and Public Comment 06/18/2026.

I, Jessica Ketner, respectfully request that this memorandum and all attachments be:

1. Entered into the official public record for these applications;
2. Made available to the citrusclerk.portal.civicclerk as public record;
3. Distributed to all Planning & Development Commission members and staff;
4. Distributed to all Board of County Commissioners members and staff; and
5. Retained as part of the official record for all future hearings and proceedings related to these applications.

Please confirm receipt and inclusion into the record and distribution to all intended parties and CC via email at keepingCCbeautiful@gmail.com

Thank you.

I. Executive Summary

Firstly, this report and the findings within have been compiled over months through the efforts of dozens of local independent researchers, multiple groups representing the residents near the Holder Industrial Park, and concerned residents themselves who live near the Holder Industrial Park (within 1 mile or less). It does not represent the full scope of community efforts or represents the entirety of the community who live near the HIP who are in opposition of the rezoning of Holder Industrial Park (as there are many more voices that still need to be heard). But those of us who have come together to collaborate and provide the public with insight, data, facts, and comprehensive questions in this letter wish to present these findings on behalf of those who are unable to make meetings or have the technological means to correspond with the PDC or BOCC.

It is our sincere hope that those with the authority to make decisions that could change the quality of life for our residents, our children, and environment (for better or for worse)...for generations to come read this fully cited and resource packed letter in full so that our voices and concerns can be heard and acknowledged...

The Holder Industrial Park matter should not be treated like a routine follow-up to the 2019 approval. **It is not.**

The record shows that the 2019 approval created a site-specific industrial subarea framework for roughly 555 to 557 acres. The current 2025/2026 applications ask the County to add approximately 798.6 more acres to that framework. That is not a small adjustment. That is more than doubling the original industrial footprint.

The size of the project is also not being stated consistently in the record. The June 18 agenda memorandum identifies the proposed total as approximately 1,356 acres. One version of the June 18 redline subarea text identifies the HIP Subarea as 1,370.6 acres MOL. [S1, S3]

That needs to be clarified before anyone votes.

Those acreage numbers are not just technical details. They determine how much land is being moved into this industrial framework, how far the Planned Service Area is being expanded, how much land may become Heavy Industrial, and how much future infrastructure burden the County is being asked to take on. This affects water, sewer, stormwater, roads, power demand, traffic, emergency services, buffers, nearby homes, and the future land use pattern of this part of Citrus County.

Put plainly: this is not the original 2019 Holder Industrial Park simply moving forward. This is a much larger and materially different entitlement package being layered on top of the 2019 approval.

The County should not treat this like housekeeping. It should be reviewed for what it is: a major industrial expansion with long-term consequences for surrounding residents, public infrastructure, water resources, and the future of Citrus County, **and an application that looks vastly different than what was presented in March of 2026.**

The current applications do more than add land. That is important.

The applications also seek to expand the Planned Service Area, amend the Future Land Use Map, amend the LDC Atlas, and move additional lands from residential, agricultural, conservation, and utility-type designations into an Industrial / Heavy Industrial framework. [S2, S3]

That means land that was not previously part of the 2019 industrial approval would be pulled into a much larger industrial plan.

The applications also revise the HIP Subarea Plan itself. That matters because the Subarea Plan is the rulebook for what can happen on this land later. Once that rulebook is changed, future development may not come back to the public in the same way this application does.

The proposed changes also add data-center related language, including information processing, data storage, and data center utilities. They add or broaden infrastructure tied to major power demand, including substations and energy storage. They adjust transportation access. They also create a predictable entitlement framework for future industrial recruitment. [S2, S3]

That last part matters. **"Entitlement certainty"** may sound harmless, but in plain English it means this: approve the broad permissions now so future users can move faster later.

That may help the applicant market the site, but it creates a fundamental problem for the public. Residents are being asked to accept the land use changes now, before the County knows the final end user, the final site plan, the final power demand, the final water demand, the final traffic impacts, or the final noise and emission profile.

That is backwards.

The County should not approve the broad entitlement first and ask the hard questions later. The challenging questions need to be answered before the entitlement is granted, not after.

The record also shows one of the biggest problems with this application because nobody knows exactly what is coming.

There is no identified end user. There is no final site design. There is no final operator. There is no final buildout plan showing exactly what will be built, where it will be placed, how large it will be, or how intense the use will become.

That matters because the biggest impacts depend on the final use. Water demand, sewer demand, traffic, stormwater, air emissions, noise, power demand, emergency response needs, and overall operational intensity can change dramatically depending on whether the site becomes warehousing, manufacturing, cold storage, aerospace, electronics, a data center campus, or some combination of uses.

At the March 5 hearing, applicant representatives acknowledged that no specific industrial tenant had been identified, including data centers. They also acknowledged that the proposal was conceptual. [S2, S3]

That should stop this process from being treated like a simple map change or even be considered for an Atlas map change for our county.

The County is being asked to approve the land use permissions first, while the real-world impacts are left for later. Residents are being asked to trust that the details will be handled after the entitlement is already granted.

That is not good enough.

If the County does not know the final user, final design, final utility demand, final power demand, final water demand, final noise profile, or final emissions profile, then the County does not yet know what it is approving in practical terms.

To be clear, the applicant has made revisions since this process began. The record includes discussion of a 100-foot buffer, central utilities, open-space mapping, prohibition of mining, and closed-loop liquid cooling with dry coolers for data centers. [S3, S9]

Those changes matter. They should be reviewed. But **they do not solve the main problem.**

1. A bigger buffer does not tell the County who the final end user will be.
2. Central utilities do not tell the County how much water, sewer, or power will actually be needed.
3. Open-space mapping does not answer whether the remaining development area is compatible with nearby homes.
4. A prohibition on mining does not erase the impacts of Heavy Industrial use.
5. Closed-loop cooling language has raised multiple concerns of its true impact and are still being reviewed.
6. The applicant still does not answer the full question of data center scale, power demand, backup generation, emissions, noise, or future technology changes.

In other words, the revisions are not a substitute for knowing what is actually being approved.

The core question remains simple: should Citrus County grant a long-term, large-scale industrial entitlement package **before** the County knows the specific future use, operator, scale, infrastructure demand, and compatibility impacts?

The answer should be no.

The County should not approve a broad industrial framework first and hope the details work out later. That puts the risk on residents, nearby property owners, public infrastructure, water resources, and future boards who may be left dealing with impacts that should have been addressed **before** approval.

The central conclusion is straightforward: **This is not simply the 2019 Holder Industrial Park moving forward.**

This is a much larger and more intensive entitlement package being built on top of the 2019 approval. It adds hundreds of acres, expands the Planned Service Area, changes additional land into an Industrial / Heavy Industrial framework, adds data-center-capable language, and brings major questions about utilities, energy demand, transportation, water, sewer, stormwater, compatibility, public infrastructure, and nearby residential impacts.

All while raising serious concerns regarding conservation parcels, flood plain impacts, karst area concerns, grant issuance and possible clawback triggers, actual land area use, and resident concerns, to name a few.

The County is not just being asked to approve land on a map. **It is being asked to approve a framework that could shape what happens on this land for decades with uncertain entitlements being demanded**. Once that framework is approved, future projects may move forward faster, with fewer chances for the public to weigh in.

That is why this decision matters so much.

The 2019 approval was sold as a controlled industrial park with site-specific safeguards. The 2026 request is asking the County to stretch that approval into a much larger, more intense, data center capable industrial framework. Those are not the same thing. Citrus County should not approve a 1,300-plus acre Heavy Industrial framework first and figure out the real-world impacts later. The County should require the answers now, before the entitlement is granted.

Does the county remember that the Holder Industrial Complex was promised to be created for the people of Citrus County, to benefit our economy? Not for a singe private profit entity to strong arm commissioners claiming they are following our county laws and codes.

Where exactly are they getting ordinance code language from as what was presented in the June Agenda packet minutes? The ordinance that appears this application is drafted from was dismissed on 5/12 at the BOCC meeting.

Ask yourselves, **has Deltona made good on any of the conceptual promises they made to the County since 2019?** Do you remember what was actually agreed on as commitments by Deltona to the County?

1. It was a defined 555/557-acre light industrial subarea, not a 1,300+ acre heavy industrial campus.
2. The site was supposed to have specific mapped industrial tiers with "meaningful and predictable standards and guidelines."
3. The project was supposed to protect natural resources, open space, floodplain functions, and stormwater standards.
4. Utility concurrency had to be proven for each project.
5. Central water and sewer were tied to a threshold of 17,500 gallons per day of water or wastewater, development within HIP had to be served by central sewer and water.
6. Transportation was supposed to be limited to two entrances.
7. Certain nuisance or incompatible uses were expressly prohibited.
8. An economic promise about industrial jobs and diversification with a 551-acre industrial zoned site expected to create 3,800 jobs, with many in manufacturing, warehousing, and industrial services."

[S1, S3, S5, S8]

Did they/are they fulfilling those commitments with their new request for the HIP? Let's take a look:

1. Deltona is asking to add about 798.6 acres. The June 18 packet says the current HIP is 557.4 acres, the proposed expansion is 798.6 acres, and the proposed total is 1,356 acres +/-. Another proposed text version says the HIP Subarea would become 1,370.6 acres MOL. The 2019 approval was for a 557-acre **light** industrial park. The 2026 request is for a 1,300-plus-acre **heavy** industrial framework. **Those are not the same commitments agreed upon.**

2. The 2019 framework was sold as **controlled and site-specific**. The new request is about making the site **easier to market and faster to develop later**. The June 18 materials

emphasize "entitlement certainty," saying it is critical for site selection shortlists and that a predictable subarea framework supports faster project wins. **A question would arise whether or not these new developments are actually looking out for the best interests of the county, or looking out for the interests of the developer for a land-flip deal of the century?**

3. Also, Intent is not the same thing as a binding protection. If those areas presented on the applicants materials are truly protected, they need to be locked into the actual adopted Subarea Plan, not just shown on a presentation map. A colored open-space map does not protect residents unless the County makes it enforceable.

4. The proposed revisions replace that older structure with broader language that all development in HIP shall be serviced by central water and sewer and that electrical substations are authorized in all Tier categories. They are asking for the big utility framework before the County knows the final user or true utility demand. **You cannot prove utility impacts for a project when you still do not know what the project is.**

5. Central water and sewer were triggered once HIP development hit 17,500 gallons per day of water or wastewater, and any new onsite central wastewater service had to provide Advanced Wastewater Treatment and reuse capability. Central utilities are not the problem by themselves. The problem is approving a utility-heavy industrial campus before the County knows the final load. The June 18 packet includes the applicant's water-use comparison, but it appears to compare **ONE** conceptual 350,000 sq. ft. data center building using a total annual water consumption of 3,607,500 gallons and comparing it against a residential land use entitlement of 122,160,937 gallons of water consumption per year against. YET, in the June packet the applicant is proposing a 777-acre "DATA CENTER USE AREA. Remember, this is a **HYPER-SCALE** data center complex (not a single 350k sq ft building data center) that is being proposed. [S3]

The math just isn't mathing.

Here is the true scope of water usage (based on applicant-provided water-use figure and applicant data-center-use-area assumptions in the June 18 packet) [S3]:

Step 1: Convert one 350,000 sq. ft. data center to acres.

1 acre = 43,560 sq. ft.

350,000 ÷ 43,560 = **8.03 acres**

So, one 350,000 sq. ft. data center building has a footprint of about 8 acres, before roads, spacing, stormwater, substations, generators, parking, office/support buildings, and other infrastructure.

Step 2: Apply the applicant's "50% of land for data center use."

If the data center use area is 777 acres, and their own plan says 50% of land for data center use:

777 acres × 50% = **388.5 acres available for data center use**

Step 3: Estimate how many 350,000 sq. ft. data center buildings fit.

388.5 acres ÷ 8.03 acres per building = **48.4 buildings**

So, based only on raw building footprint, roughly 48 buildings of 350,000 sq. ft. could fit inside the 50% data-center-use portion of a 777-acre data center use area.

To be conservative, if we include the applicants' attached 50,000 sq. ft. office with each one, that is 400,000 sq. ft. total, or:

400,000 ÷ 43,560 = **9.18 acres**

388.5 ÷ 9.18 = **42.3 buildings**

So, the realistic talking range is:

About **42 to 48 applicant-sized data center buildings**, depending on whether you count the 50,000 sq. ft. office/support space as part of each building footprint.

Step 4: Water use math using applicant's own number.

The applicant says one conceptual data center uses 3.6 million gallons per year. More specifically, the water-consumption exhibit gives 3,607,500 gallons annually for one 350,000 sq. ft. building plus 50,000 sq. ft. office.

Using their number:

If 42 buildings fit:

42 × 3,607,500 = **151,515,000 gallons per year**

If **48** buildings fit:

48 × 3,607,500 = **173,160,000 gallons per year**

Compare that to their residential comparison of 122,160,937 gallons of water consumption per year.

That is approximately **51 MILLION MORE GALLONS OF WATER ANNUALLY.** And depending on the water cooling system, that number could be much much higher.

How is this looking out for Citrus County and our resources?

6. The original HIP framework had a more limited transportation structure. In the current materials, the 2026 revision highlights show the transportation policy now allows **three** access points instead of the original commitment of two, two on CR-491 and one on US-41, plus right-of-way dedication for a 200-foot-wide corridor at the time of expansion of US-41 and CR-491. That is not a minor traffic tweak. That is a sign the project is being positioned for a much larger level of industrial activity. If the project needs expanded access and future roadway corridors, then it is not the same project residents were told about in 2019.

7. The HIP made a commitment that they would not bring in "Prohibited nuisance/incompatible uses" to the park. Removing mining does not erase the new impacts created by data centers, substations, energy storage, backup generation, continuous cooling equipment, power demand, audible, and tonal noise. They took one high-impact use off the table, then added a whole new category of high-impact industrial risk target sectors: Data Centers and Cloud Infrastructure as a primary target.

8. **3,800 jobs were proposed for the HIP.** The 2019 packet cited the need for industrial sites and stated that a larger manufacturing base would create well-paying jobs and bring new capital into the region. **Which was the whole reason why the county even considered taking 500+ acres of AGRICULTURE AND RURAL LAND and amending the FLUM to allow light industrial in the first place right?** If the promise was jobs, the County should not settle for megawatt large-load customers, data centers, and data storage facilities that **produce less than 50 permanent jobs** statistically. Even less when majority of maintenance **jobs are outsourced**. If the public benefit was sold as jobs and diversified industrial growth, then the County should not approve a framework that could become dominated by a low-employment, utility-heavy data center campus without first proving the public benefit still matches the promise. **But that is the problem, they can't prove it.**

[S1, S2, S3, S5, S8]

Looking at these distinctions between what was agreed upon and accepted by the public and the residents of this county as the original approval of the HIP, and what the HIP is trying to do now is GROSSLY INCOMPATIBLE.

II. What Was Approved in 2019

A. Application identity and purpose

The 2019 BOCC item was CPA-19-01, submitted by Clark A. Stillwell for Deltona Corporation. This was the original Comprehensive Plan amendment tied to the Holder Industrial Park framework.

The official agenda memorandum says the application requested changes to the Future Land Use Element, including Figure 10-28 for the Planned Service Area, and text related to Future Industrial Land Uses. It also states this was the second of two required hearings, after the BOCC had already approved transmittal to state agencies for review and comment on June 10, 2019. [S1]

That matters because the 2019 approval was not a casual administrative step. It went through the formal Comprehensive Plan amendment process. It was reviewed, transmitted, and brought back for final hearing based on the project framework presented at that time.

So, when the current application is described as just an expansion of the 2019 approval, that needs to be tested against the actual 2019 record. The question is not whether Holder Industrial Park existed in 2019. It did. **The question is whether the County is being asked to approve the same project now.**

The 2019 ordinance did not simply acknowledge that Holder Industrial Park existed. It changed the Comprehensive Plan. The ordinance material revised the Planned Service Area figure and revised text in Chapter 10 of the Comprehensive Plan related to Future Industrial Land Uses. [S1, S5] That makes the 2019 action important. It was not just a generic zoning note or a casual recognition of industrial land. It was a formal Comprehensive Plan amendment that created the policy framework for the original Holder Industrial Park approval.

That matters now because the current applicant is relying heavily on the 2019 approval as the foundation for the 2025/2026 request. But if the 2019 approval created a specific Comprehensive Plan framework, then the County has to compare the current proposal against that framework.

The question is simple: are they building within the 2019 framework, or are they asking the County to change it into something much **bigger**?

The record points to the second answer.

B. Acreage and site framework

The County's own 2026 record confirms the size of the original 2019 framework.

The current applicant narrative describes the 2019 approval as HIP Subarea Plan text for approximately 555 acres MOL, along with a Planned Service Area boundary expansion and redesignation of the GFLUM and LDC maps into Industrial District, subject to the HIP Subarea text

and maps. The June 18, 2026, agenda memorandum describes the existing HIP Subarea Plan as approximately 557.4 acres. [S3]

That gives us the **baseline**.

The original approval was not for a 1,300-plus-acre industrial campus. It was for a roughly 555-to-557-acre industrial subarea with its own text, maps, and conditions.

That is why the current application cannot honestly be treated as just the 2019 approval moving forward. The 2019 approval is the starting point. The 2026 request is asking the County to expand and change that starting point in a major way. For comparison purposes, the 2019 approved baseline should be treated as approximately 555 to 557 acres.

C. 2019 as a response to earlier denial

The 2026 application history also confirms something important: this site already had a failed version before the 2019 approval.

According to the 2026 record, an earlier 2016/2017 industrial application was denied after concerns were raised about undefined industrial uses and possible heavy-industrial impacts. [S3]

That matters**, because** the recent applications raise the same exact concerns.

The 2019 approval appears to have been the applicant's more specific response to that denial. Instead of asking for **broad**, undefined industrial approval, the 2019 framework used a Subarea Plan with tiered uses, maps, standards, and conditions.

In plain terms, the County had already said no once when the industrial request was too open-ended.

The 2019 approval was not supposed to be a blank check. It was a more controlled framework created after the County had concerns about undefined industrial uses and **heavy industrial** impacts.

That history should matter now. If the County was concerned about undefined industrial uses in 2017, it should be even more careful in 2026 when the applicant is asking to more than double the footprint, add data-center-capable language, and approve a larger entitlement package without a final end user or final site plan.

D. PSA and utility framework

The 2019 action also expanded the Planned Service Area for the original HIP area and included utility and concurrency language. The existing framework required central water and sewer once water or wastewater thresholds were reached, and it kept utility review tied to future development. [S1, S3, S5]

That is important because the 2019 framework was not written for what is being discussed now.

It was not written around data centers. It was not written around data center utilities. It was not written around energy storage, substations across all tiers, large-load customer infrastructure, or hyperscale facility operations. **Most importantly,** it was not written around heavy industrial no matter what industry type designation.

Those are not **trivial details**. A **heavy industrial facility, including, but not limited to, a** data-center capable industrial campus brings a different level of utility demand, power demand, cooling needs, backup systems, and infrastructure pressure than a traditional industrial park.

So, the County should not treat the 2019 utility language as if it already answered the 2026 questions. It did not.

The 2019 framework may have addressed ordinary industrial utility service for the original HIP area. The current request is asking for a much larger and more utility-intensive framework. That requires a fresh, specific, and enforceable review before approval.

E. Transportation framework

The original 2019 framework also included planned access and transportation commitments. It was not just land on a map. Access points, roadway impacts, and transportation improvements were part of the overall project framework.

The 2026 proposal changes **the** transportation framework. The current materials discuss adding **a** third access point and include right-of-way dedication along county and state roads shared with surrounding residences. [S2, S3]

That matters because transportation changes usually follow intensity. If the project needs more access, more right-of-way, and future road planning, then the County should recognize that this is not the same industrial park footprint approved in 2019.

This is another example of the applicant asking for more than a simple continuation of the old approval.

The public should not be told this is just the 2019 project moving forward when the 2026 request changes the size, the land-use framework, the utility framework, the transportation framework, and the future development potential of the site.

III. What Was Proposed in March 5, 2026, PDC Packet

A. The two linked applications

The March 5 PDC packet included two linked applications. These applications work together.

- CPA-2025-00012 asks to amend Chapter 10 of the Comprehensive Plan to extend the Planned Service Area to the boundaries of the CPA/AA-2025-00013 application area. In plain English, that means the County is being asked to expand the area planned for public infrastructure service so this larger industrial expansion can fit inside it.
- CPA-AA-2025-00013 asks for **a** bigger land-use change. It seeks to amend the Future Land Use Map from AGR, CON, LDR, RUR, and TCU to IND with a Subarea Plan. It also seeks to amend the LDC Atlas Map from AGR-MH, LDR-MH, RUR-MH, and TCU to IND Heavy Industrial. [S2]

That is not a small paperwork change.

This application would move land currently designated for agricultural, conservation, low-density residential, rural residential, and transportation/communication/utility uses into an Industrial / Heavy Industrial framework.

That is the heart of the issue. The County is not just being asked to approve an industrial park name. It is being asked to change what this land is allowed to become.

B. Proposed acreage expansion

The applicant's own materials describe the scale of the expansion clearly. HIP would grow from approximately 550 acres to approximately 1,348.6 acres MOL, adding approximately 798.6 acres MOL. The March 5 hearing minutes describe the existing park as roughly 557 acres and the proposed expansion as nearly 800 additional acres. [S2, S3]

That is the math that matters.

This is not a small edge adjustment to an existing industrial park. It is an attempt to more than double the size of the original HIP framework.

Residents should not have to dig through hundreds or thousands of pages to understand that basic point. The County is being asked to take a roughly 557-acre **LIND** industrial approval and turn it into a 1,300-plus-acre **heavy** industrial framework.

C. Proposed new uses and data-center language.

The applicant's own analysis brings the data center issue directly into the record.

The proposal would add information processing, data center utilities, and data storage to permitted uses within the expanded industrial park boundaries. The same analysis also acknowledges that the current Citrus County LDC does not specifically address data centers as a use category. Because of that gap, the analysis says the County would either need to amend the LDC or rely on similar industrial classifications. [S2] **Yet, as we are aware of, there are no similar industrial classifications to a hyper-scale data center that Citrus County has ever adopted in their LDC before.**

That is one of the most important admissions in the record.

This is not residents guessing. This is not social media speculation. This is not people overreacting to a rumor.

Data-center related language is in the applicant materials, and the applicant's own analysis acknowledges that Citrus County's current LDC does not specifically address data centers as a use category. [S2**, S3**]

That should matter before any vote is taken.

If the County does not currently have a clear data center use category in the LDC, then the County should not approve a massive industrial expansion that adds data-center-capable language and leaves the hard standards to be figured out later.

The County should write the rules first. Then decide whether this use belongs here. **Not let our county be shaped by one land reselling developer.**

With the **recent breaking news of Walton County and Jackson County adopting TOTAL BANS of ALL data centers** into their Land Use Development Codes under Resource and Protections, there is an urgent need for Citrus County to look much more deeper into these types of industries and whether we want our Nature Coast to become the Industrial center of a sole use company on over 1,300 acres of land or not. [W1, W2]

This is unheard of in nature preservation capitals around the state.

Citrus County could become the first county to allow a hyper-scale data center to be built in the State of Florida.

Do we want to be known for that?

Would it benefit our tourism industry?

Our natural pristine attraction?

The qualities that make Citrus County the Nature Gem of the East Coast of our Nation?

No. We would make front-page news across the Nation for allowing something so controversial to our vision for our area, affecting surrounding counties as well.

I would hope we would continue to be known for our beautiful water resources, our wooded forests, our pristine springs, our unique karst topography, and our rural beauty which has attracted generations of residents to live here, and many others to come visit us.

D. Site-characteristic claims

The applicant also described the condition of the expansion area. According to the record, much of the area contains wooded land associated with former mine pits that naturally revegetated over time. The applicant stated that several deep mine pits and floodplain areas are located throughout the property and suggested those areas would likely remain open space and tree preservation areas because they are not suitable for development. Even with those areas removed from likely development, the applicant still estimated approximately 500 acres of the expansion area as developable. [S2, S3, S9]

Even if the County accepts the applicant's open-space representations, this is still not a small project. A 500-acre developable area is a major industrial development area by any normal standard.

The applicant also stated that 39 parcels adjoin the expansion area, including mobile homes, single-family homes, and vacant parcels. [S3] That means residential adjacency is not a side issue. It is not incidental. People live next to this proposed expansion area.

Compatibility with nearby homes should be one of the central questions before any approval is granted**, regardless of if the lots nearby are currently vacant or undeveloped. They have potential to be 100% occupied, and they deserve land-use rights to those parcels.**

The County should not look at former mine pits and open-space areas and assume the compatibility problem is solved. The real question is what happens on the 500 acres that can be developed, how close that development gets to homes, and whether Heavy Industrial or data-center-capable uses can truly coexist with nearby residential properties without creating noise, lighting, traffic, utility, stormwater, emergency-response, and quality-of-life impacts.

The applicant attempts to soften the residential adjacency issue by stating that 44% of adjacent residential lots and 59% of adjacent residential parcel acreage are vacant. But vacant does not mean irrelevant. Vacant residential land still carries residential rights, future home potential, property value, and compatibility protections. More importantly, the same record confirms that adjoining parcels include existing mobile homes and single-family homes. **The presence of vacant parcels does not erase the people already living next to the proposed expansion, and it does not eliminate the County's duty to evaluate compatibility.**

E. Buffer proposal

At the March 5 hearing, the applicant described a 75-foot natural buffer adjacent to residential properties and a 25-foot buffer along County Road 491 and US 41. Later in the same hearing record, applicant representatives stated that staff requested, and the applicant agreed to **an increase from 75 feet to 100 feet.** *[S3]*

The increase from 75 to 100 feet should be acknowledged. However, the planning question remains **whether 100 feet is adequate for Heavy Industrial, data-center-capable, large-load, continuous-operation infrastructure adjacent to residential parcels.**

There are tonal noise, audible noise, and air-pollution factors that must be considered with residents and data reports collected from already completed hyper-scale centers showing impacts up to *three* miles.

Because these impacts are still being evaluated by governing agencies, assuming a 100-foot buffer will suffice, it is not good enough.

F. No identified end user

The March 5 record is clear: no specific industrial tenant had been identified, including any data center operator. The applicant also stated that multiple industrial uses were possible, and applicant representatives described the concept plan as conceptual, not a final site design or proforma. [S2, S3]

That is a major problem.

The County is being asked to approve a broad land-use entitlement without knowing who the final operator will be, what will actually be built, where it will be placed, how large it will be, or how intense the final use will become.

That means the County also does not yet know the real utility demand, power demand, water demand, sewer demand, traffic profile, stormwater impact, noise profile, emissions profile, emergency-response burden, or compatibility impact. Those details are not minor. Those are the impacts residents will have to live with.

The applicant may call the plan conceptual, but the entitlement being requested is real. Once the land use framework is approved, future users may be able to move forward under that framework even though the public never saw the final project during this hearing.

Citrus County should not approve a **"blank check"** industrial framework and then ask residents to trust that the details will be handled later.

G. Economic-development framing

The applicant frames the project as a broad economic-development asset. The materials say the expanded site could support medical device manufacturing, aerospace, defense, electronics manufacturing, cold storage, and data centers. Data centers are presented as one possible use, not the only possible use. [S2]

The applicant also relies on economic impact modeling that projects major tax benefits, including property-tax and sales-tax revenue. Separate grant-related materials tied to the earlier industrial park concept referenced even larger job and GDP projections. [S2, S8]

Those numbers may sound impressive, but they do not answer the land-use question.

But let's say the applicant decides to drop the "data center" language and ask the county to still approve the heavy industrial rezoning?

Economic projections are only as reliable as the assumptions behind them. **If there is no final end user, no final site plan, and no final mix of uses, then the County does not yet know whether the final buildout will actually match the jobs, wages, tax benefits, and public benefits being discussed, regardless of industry type.**

In plain terms, the County could get far fewer permanent local jobs, fewer completed commitment obligations, and fewer overall economic benefit while **still taking on major power, water, utility, road, emergency-service, noise, and compatibility impacts.**

The County should not approve a major entitlement package based on best-case economic projections while the actual future use remains unknown. **If public benefit is being used to justify the impact, then the public benefit needs to be proven, not assumed.**

H. Water and cooling claims

The applicant stated the proposal included closed-loop liquid cooling systems with dry coolers for data centers. Applicant representatives said initial water use would occur upfront, and the system would be designed to minimize ongoing water consumption. However, **board questions revealed unresolved details, including lack of evaporation-rate information at a 20-megawatt or larger scale**. *[S3]*

The phrase "closed loop" does not complete the water analysis. The County **still needs binding details on scale, megawatt load, cooling design, makeup water needs, discharge/wastewater profile, backup systems, and permit conditions.**

Where are those reports?

IV. Environmental, permitting, and decommissioning concerns

PDC members raised serious concerns at the March 5 hearing. Those concerns included impervious surfaces, stormwater flow, habitat impacts, environmental assessment, mitigation plans, wildlife impacts, utility capacity, air emissions, noise, and decommissioning. [S3]

Those are not side issues. **Those are the impacts that determine whether this project is compatible, safe, and appropriate for this location.**

The applicant generally responded that many of these issues would be addressed later through permitting. The applicant also stated that an environmental assessment or mitigation plan was not required in the packet. [S3]. *That is one of the biggest procedural problems with this application.*

The applicant is asking for the major land use entitlement now, while pushing many of the real impact questions into later permitting. **That may be convenient for the applicant, but it is not good enough for the public and should not be good enough for an ATLAS amendment, LDC amendment, Comp Plan amendment, and overall ordinance amendment.**

Once the County grants the land-use framework, the public may not get the same opportunity to challenge the final details. Residents could be left hearing, "That will be handled at permitting," only to later hear, "The land use was already approved." Or "sorry, we thought things were going to turn out different". Cue the litigation suits.

That is backwards. The County should not approve the entitlement first and study the impacts later. The impacts are the reason this decision matters.

V. What Is Being Put Forward for June 18, 2026

A. Hearing posture

The June 18 PDC agenda brings the same applications back for continued review. The packet includes the March 5, **2026,** draft minutes and the continued applications CPA-2025-00012 and CPA-AA-2025-00013. The June 18 agenda memorandum recommends that the PDC conduct a public hearing and make a recommendation to the BOCC. [S3]

That means June 18 is not just a routine update. It is the next step in moving these applications toward the Board of County Commissioners.

This is the point where the PDC is being asked to decide whether this expanded industrial framework should move forward with a recommendation. That recommendation matters because it helps shape what the BOCC receives next.

For residents, the June 18 hearing is a critical moment to put concerns into the record before this reaches the final County decision-makers.

B. June 18 application description

The June 18 agenda memorandum confirms the scale and type of land use change being requested.

CPA-AA-2025-00013 asks to amend the Future Land Use Map from AGR, CON, LDR, RUR, and TCU to IND with a Subarea Plan. It also asks to amend the LDC Atlas from AGR-MH, LDR-MH, RUR-MH, and TCU to IND Heavy Industrial. [S3]

In plain English, this application would move land out of agricultural, conservation, low-density residential, rural residential, and transportation/communication/utility designations and into an Industrial / Heavy Industrial framework.

The same June 18 memorandum describes the existing HIP Subarea Plan as approximately 557.4 acres, the additional area as approximately 798.6 acres, and the total proposed Subarea Plan as approximately 1,356 acres. [S3]

This is not just adding a few parcels to an existing park. This is a major land-use conversion and a major expansion of the original industrial footprint. It changes both the size of the project and what the land can become.

C. Acreage discrepancy

There is also an acreage issue that needs to be resolved before any vote.

The June 18 redline subarea text refers to the HIP Subarea as changing from 557.0 acres to 1,370.6 acres MOL. Other materials use different numbers, including approximately 1,348.6 acres and approximately 1,356 acres. [S2, S3]

That may sound like a technical detail, but it is not.

The acreage figure determines the size of the entitlement, the amount of land being moved into the industrial framework, the scope of the Planned Service Area expansion, and the area where future development rights may apply.

The County should clearly state which acreage number is legally controlling and why the numbers differ. Residents should not have to guess how much land is actually being approved.

D. Expanded attachment record

The June 18 packet is much broader than the March 5 packet. It does not just repeat the earlier materials.

The June 18 record includes applicant PowerPoints, intervenor materials, data center use area maps, redline subarea text, adjacent residential lot exhibits, a development area exhibit, water consumption materials, a Duke Energy letter of support, a sector plan exhibit, and the underlying Comprehensive Plan and Atlas amendment applications. [S3]

That matters because the June 18 packet shows how much this application has grown in detail and complexity.

By June 18, the record was not simply about a general industrial park expansion. The packet included data-center-specific maps, water-use materials, energy-related support materials, residential adjacency exhibits, and revised subarea language.

In plain terms, the record got bigger because the issues are bigger. **We need to ask ourselves, if the issues keep getting bigger…is it worth it?** Usually, bigger issues mean bigger problems later down the road. Big, likely expensive problems.

The June 18 packet confirms that the application now carries major questions about data center use, water demand, power infrastructure, residential compatibility, open space, transportation, and the final rules that would control future development.

E. Subarea purpose and entitlement certainty

The June 18 materials show the real purpose of this application more clearly than the formal planning language does.

On paper, the redline subarea text describes the HIP Subarea as a multiuse industrial development project with related ancillary uses, necessary infrastructure, and future economic diversity. That sounds neutral. But the applicant's own presentation tells the practical story more plainly.

The applicant describes HIP as a "rare large-acreage, infrastructure-served industrial opportunity." The same presentation **says,** "entitlement certainty is critical for site-selection shortlists," that "rezoning uncertainty can eliminate HIP from consideration early in site

selection," and that a "predictable subarea framework supports faster, cleaner project wins." [S3]

That is not just planning language. That is a recruitment strategy.

The applicant is asking Citrus County to turn the Comprehensive Plan into a marketing tool for future industrial recruitment, data centers and cloud infrastructure directly inside the recruitment strategy. In other words, approve the broad permissions now, make the site easier to sell later, and let the public-impact details come after.

The public is not being asked to review a finished project. The public is being asked to approve the sales platform for whatever comes next.

That should concern every resident and every decision-maker **of our county**. **It takes control and direction out of our carefully planned comprehensive plan and says, "Citrus County is up for sale".**

If the applicant wants the County to grant entitlement certainty, then the County should require impact certainty first. That means clear answers on the final use, final site layout, maximum buildout, water demand, power demand, sewer demand, stormwater, traffic, noise, emissions, emergency response, decommissioning, and compatibility with nearby homes.

Citrus County should not become the applicant's marketing department before residents get the facts.

VI. Legal and Planning Framework

A. LDC purpose and interpretation

Citrus County's Land Development Code is not just a technical rulebook. It is the County's tool for carrying out the Comprehensive Plan **which goes through several legislative review processes**.

The LDC states that it was adopted under Chapter 163, Part II, Florida Statutes, and Chapter 125, Florida Statutes. It also states that its primary purpose is to implement the Comprehensive Plan. [S4, S6]

That matters because the County cannot look at this application only through the lens of economic development or site marketing. The LDC has broader duties.

The stated purposes of the LDC include protecting public health, safety, comfort, order, appearance, convenience, morals, and general welfare. It also includes protecting land values,

protecting landowners from adverse impacts of adjoining development, maintaining the stability of residential and agricultural areas, promoting orderly industrial development, and protecting natural resources, water resources, wildlife habitat, fisheries, and threatened or endangered species. [S4, S6]

The LDC also says that when its standards overlap or conflict with other regulations, the more stringent restriction controls. [S4] That means the County is not required to choose the weakest path or approve the broadest possible entitlement just because an applicant wants certainty.

The HIP is surrounded by Conservation Lands and Wildlife-Management areas...

This area is not an isolated industrial site surrounded only by industrial uses. The broader area includes major public conservation lands, wildlife-management areas, state forest lands, wetlands, floodplain systems, and lands protected for water-resource and habitat purposes.

The nearby conservation landscape appears to include [S16]:

1. Bearhead Hammock / Two Mile Prairie Tract, Withlacoochee State Forest

This appears to be what they mean by "Bear Hammock Preserve." The official name looks like Bearhead Hammock, part of the Two Mile Prairie Tract of Withlacoochee State Forest. State Forest reservation materials describe Bearhead Hammock as being within the Two Mile Prairie Tract in Citrus County, about 10 miles north of Inverness, with equestrian trails and primitive campsites.

2. Citrus Wildlife Management Area / Citrus Tract of Withlacoochee State Forest

FWC says Citrus WMA includes nearly 50,000 acres in Citrus and Hernando Counties, just west of Inverness, and is one of the large tracts making up Withlacoochee State Forest. It supports red-cockaded woodpeckers, indigo snakes, fox squirrels, gopher tortoises, white-tailed deer, and is part of the Great Florida Birding and Wildlife Trail.

3. Potts Preserve / Potts Wildlife Management Area

SWFWMD says Potts Preserve was acquired for protection of groundwater recharge, surface water features, and wetland habitats. It also says the preserve's wetlands play a role in both the Tsala Apopka Chain of Lakes and Withlacoochee River systems. FWC separately describes Potts WMA as over 4,000 acres of protected water resources along the Withlacoochee River and Tsala Apopka Chain of Lakes in northeast Citrus County.

4. Flying Eagle Preserve / Flying Eagle WMA

This is farther south/southeast in the regional conservation network, but it matters because it shows the same pattern: large public lands were protected for water, wetlands, aquifer recharge, wildlife, flood conveyance, and recreation. FWC says Flying Eagle WMA is more than 10,000 acres, with lakes, marshes, swamps, and Withlacoochee River frontage, and helps recharge the Floridan aquifer.

These wildlife management areas were protected for natural habitat, public recreation, groundwater recharge, wetland systems, floodplain function, surface-water protection, and the natural character of Citrus County.

How would a 1,300-plus-acre Industrial / Heavy Industrial framework, with or without data center capable uses, substations, energy infrastructure, roads, stormwater systems, and major impervious-surface potential impacts in the middle of a region already recognized for conservation, wildlife, wetlands, karst, floodplain, and water-resource values **be considered at all compatible**?

Before approval, the County should require a map-based analysis showing the relationship between the proposed HIP expansion and nearby conservation lands, wildlife-management areas, wetlands, floodplain systems, state forest tracts, wildlife corridors, and public recreation lands. The County should also require review by appropriate natural-resource agencies, including FWC, SWFWMD, and other agencies with jurisdiction or expertise.

These protected lands were set aside for a reason. The County should not approve a major Heavy Industrial expansion next to or near them without first proving that the project will not fragment habitat, disrupt wildlife movement, increase stormwater or flooding impacts, degrade water resources, or undermine the public investment already made in surrounding conservation lands.

The County has the authority to require strong safeguards before granting this kind of approval. That includes compatibility protections, infrastructure proof, water and sewer capacity,

stormwater review, environmental protection, traffic analysis, noise and lighting controls, emergency-response planning, and public-health safeguards.

The County's job is to apply its own Comprehensive Plan and LDC in a way that protects the public**'s rights, the rights of surrounding property owners, and the vision of the county to any new development proposal.**

B. Comprehensive Plan Goal 17

Goal 17 of the Citrus County Comprehensive Plan is important because it shows what the County is actually supposed to protect. **It** says the Future Land Use Plan is intended to **"**enhance quality of life through adequate housing, services, and facilities; protection of the environment; creation of favorable economic conditions; and elimination of incompatible land uses, hazards, and nuisances.**"** [S5]

That is a balanced policy. It does not say economic development wins no matter what. It does not say industrial recruitment overrides nearby homes, water resources, infrastructure limits, or public health.

Economic development is one part of the plan. It has to be weighed against the rest of the plan and prevent incompatible land uses.

Goal 17 does not give the County permission to chase economic development at any cost. It requires the County to balance growth with protection of the people and resources already here.

C. Performance standards and resource protection

Chapter 10 makes clear that land-use review is not supposed to be shallow.

It requires the LDC to include detailed protections for tree preservation, open space, potable water sources, seasonal and periodic flooding, drainage, stormwater, environmentally sensitive lands, signs, natural resources, and historic resources. It also requires performance standards for buffering, wellfields, environmentally sensitive land, drainage, flood protection, utilities, separation of uses, environmental and water-resource protection, wetlands, open spaces, parking, access, and safe onsite traffic flow. [S5]

Compatibility is not just a buffer on a map. It is not just landscaping. It is not just putting trees between two uses and calling the problem solved.

For a project this large, compatibility has to include the full picture: water, sewer, stormwater, flooding, traffic, access, utilities, noise, lighting, environmental protection, separation from

homes, and whether the proposed use can actually fit the surrounding area without harming residents or natural resources.

A 100-foot buffer may be one piece of the discussion, but it is not the whole answer.

The County's own Comprehensive Plan requires more than a green strip around the edge of an industrial project. It requires real performance standards and real protection before incompatible impacts are allowed to happen.

D. PSA policies

Objective 17.2 does not say development belongs in a Planned Service Area just because an applicant wants the line moved.

It says development should be encouraged in Planned Service Areas where adequate services are available, design criteria are met, and future land uses coordinate with topography, soil types, projected growth, demonstrated need, environmental suitability, infrastructure availability, and community values. Policy 17.2.6 also requires sufficient potable water supply and service as detailed in the 10-year Water Supply Facilities Work Plan. [S5]

A PSA expansion is not proof that water and sewer capacity actually exists. It is a planning boundary, not a magic guarantee of infrastructure.

The March 5 minutes also show staff explaining that the PSA identifies where infrastructure is **expected but** does not guarantee water and sewer availability. [S3]

That should be a major issue in this application.

The County is being asked to expand the PSA for a much larger industrial framework before the final end user, final water demand, final sewer demand, final power demand, and final buildout intensity are known.

That is not enough.

Before expanding the PSA, the County should require proof that the proposed land use can actually be served without straining existing residents, public infrastructure, water resources, or future County obligations.

Put plainly: drawing the land inside the PSA does not make the pipes, capacity, water supply, or public-service burden disappear.

But there is a bigger issue that needs to be addressed. The sewer pipeline proposed which received grant funding helps explain why infrastructure in the PSA was being built, but it does not answer:

Utility / PSA Question	Was it fully answered?	What the record appears to show	Why this still matters
1. Was the sewer line sized for the original 551/557-acre HIP or the expanded 1,356-acre proposal?	**Not clearly answered.**	The materials reference wastewater infrastructure for HIP and describe the original site as roughly 551/557 acres, while the current proposal expands the framework to roughly 1,356 acres.	A sewer line for the original HIP does not automatically prove capacity for a much larger industrial/data-center-capable expansion.
2. Was the sewer line designed for manufacturing, warehousing, and industrial services or for data-center-scale utility demand?	**Not clearly answered.**	Grant-related materials reference manufacturing, warehousing, and industrial services. Later application materials add data-center-related uses.	Data centers may have a very different utility profile than traditional industrial uses. The County should know what the infrastructure was actually designed to support.
3. Is wastewater treatment plant capacity available?	**Partially addressed, not proven.**	The materials discuss central sewer service and indicate that additional sanitary sewer capacity upgrades may be required if needed.	Saying upgrades may be required later is not the same as proving treatment capacity is currently available for the proposed buildout.
4. Is potable water capacity available?	**Partially addressed, not proven.**	The materials discuss central water service and indicate that additional water-system upgrades or SWFWMD permitting may be needed if demand exceeds current capacity.	This means capacity may not already exist. The County should require proof before expanding the PSA and granting broad entitlements.
5. Is reclaimed water capacity available?	**Not clearly answered.**	The materials discuss reclaimed water, onsite treatment/reuse, closed-loop systems, or other water-conserving approaches for intensive uses such as data centers.	The record still needs to show the source, amount, reliability, treatment requirements, and legal availability of reclaimed water.
6. Does the expanded PSA create new	**Not fully answered.**	The PSA expansion is described as extending utility service boundaries to accommodate the	Expanding a PSA may create future expectations, planning duties, service pressures, or capital

Utility / PSA Question	Was it fully answered?	What the record appears to show	Why this still matters
obligations for the County?		expanded site. The materials also state that development would use central water and sewer.	obligations. The public needs to know what the County is committing to.

Utility and PSA concerns are based on citrus-county-holder-Grant-proposal_redacted.pdf, including the May 7, 2024 grant-related email and wastewater infrastructure materials; the June 18, 2026 PDC agenda packet; the March 5, 2026 draft minutes included in that packet; the applicant's parcel map and acreage exhibits; the applicant planning analysis; the proposed June 18, 2026 HIP Subarea Plan redline text; and Florida Statute §288.101. [S3, S7, S8]

The applicant materials acknowledge wastewater infrastructure, central utility service, future concurrency review, possible sanitary sewer upgrades, possible water system upgrades, possible SWFWMD Water Use Permit modification, and reclaimed/closed-loop water concepts for intensive uses such as data centers. However, the materials do not appear to provide a complete utility-capacity analysis showing whether the funded wastewater line was sized for the original 551/557-acre HIP or the expanded 1,356-acre proposal; whether it was designed around manufacturing/warehousing/industrial services or data-center-scale demand; whether wastewater treatment capacity is available; whether potable water capacity is available; whether reclaimed water capacity is available; or whether the expanded PSA creates future County obligations.

They say utilities are coming. **They do not prove the expanded project can be served**. Those are two different things.

E. Coastal, Lakes, and Rivers Region

Policy 17.2.11 may become one of the most important Comprehensive Plan issues in this case.

That policy says **that** consistent with protection of environmentally sensitive areas, development in the "Coastal, Lakes, and Rivers Region should not include additional high-intensity non-residential land uses". It also specifically states that "new GNC and IND districts should be avoided". [S5, S10]

That language matters because this application is asking to move additional land into an Industrial / Heavy Industrial framework.

If the subject parcels fall within the Coastal, Lakes, and Rivers Region, then the County cannot just skip over this policy. It should be addressed directly in the public record, with a clear

explanation of whether the policy applies, how the County interprets it, and how a new or expanded IND / Heavy Industrial designation can be found consistent with it.

The policy does not say, "Approve high-intensity non-residential uses if the applicant offers a buffer **or promises they won't build on it." Much like how the county accepted Deltona's commitments from 2019 that were not followed through on as mentioned in an earlier section.** The policy says additional high-intensity non-residential land uses should not be approved in that region, and new IND districts should be avoided. [S5]

So, the County needs to answer the basic question plainly: Is this land inside the Coastal, Lakes, and Rivers Region or not?

If it is, then the County needs to explain why a major expansion of Industrial / Heavy Industrial land is not in direct conflict with the policy. If it is not, then the County should put that finding clearly in the record.

Either way, this issue should be answered before any recommendation or approval.

VII. Data Center Issue

A. Data centers are part of the official record

The data center issue is not public speculation. The applicant's own materials discuss information processing, data center utilities, data storage, data center use areas, and water consumption materials. The March 5 hearing record also states that data centers were added as an allowable use. [S2, S3]

And now data centers are part of the record.

The real question is whether Citrus County should approve a major Industrial / Heavy Industrial expansion with data-center-capable language before the County has adopted clear, enforceable data center standards and before the final operator, scale, utility demand, power demand, water use, backup generation, noise, emissions, and compatibility impacts are known.

Residents are not asking the County to respond to a rumor. Residents are asking the County to respond to the applicant's own materials.

B. LDC gap and draft ordinance

The applicant's own analysis acknowledges a major problem: **Citrus County's current LDC does not specifically address data centers as a use category.** [S2]

At the same time, the June 18 packet shows the County and parties were actively dealing with data-center-specific language, maps, water materials, and use-area questions. [S3]

So, the County should not approve data-center-capable entitlements first and write the real standards later.

First, the County should decide how data centers are defined, where they belong, what approval process they require, what public notice is required, what setbacks apply, what water limits apply, what noise and emissions standards apply, how backup generation is regulated, how power infrastructure is reviewed, and how enforcement will work.

Then, and only then, should the County decide whether this site qualifies for that use.

Approving the entitlement before the rules are finalized puts the public in the wrong position. It gives the applicant a pathway before residents have protections.

Other Florida counties are already treating data centers as a serious land use issue, not as ordinary industrial development, and outright banning them.

On June 9, 2026, the Walton County Board of County Commissioners held a public hearing on an emergency ordinance to prohibit data centers and large load data center related facilities. Walton County's Board voted 5-0 to adopt an ordinance banning data centers countywide. The ordinance placed the ban directly into Walton County's Land Development Code under Resource Protection Standards, used the new Florida data center law, Chapter 2026-65 (SB-484), Laws of Florida, and tied the definitions of "large load customers" and "data centers" to state law. The prohibition applies across all land use categories and zoning districts. [W1, W3]

Similarly, on June 9, 2026, Jackson County commissioners shifted from a temporary moratorium approach and voted to move forward with a permanent ban on AI/data centers, rescinding the moratorium vote which they plan to make permanent on June 23. [W2]

This matters for Citrus County because Walton and Jackson Counties are not treating data centers as routine industrial use.

They are treating them as a special land-use category with major implications for water, power, infrastructure, environmental protection, public safety, compatibility, and local control.

Citrus County should not rush to approve a 1,300-plus-acre Heavy Industrial framework with data-center-capable language while other Florida counties are moving in the opposite direction: slowing down, studying the impacts, and in some cases pursuing full bans.

It is about recognizing the **statewide warning sign**.

If other counties are taking emergency action before a project is even filed, Citrus County should be especially cautious where an actual application is already pending, data-center-related

language is already in the record, data-center-use maps are already in the packet, and final impacts are still unknown.

The safer path is to pause, define the use, adopt clear standards, and require a full impact record before granting any data-center-capable entitlements.

VIII. Grant and Public Infrastructure Issue

A. Grant Proposal Materials and Public Infrastructure Representations

The grant record is important because the public infrastructure funding was tied to a specific public-purpose story.

The document titled **citrus-county-holder-Grant-proposal_redacted.pdf** includes a May 7, **2024,** email from Citrus County Growth Management Director / Interim Economic Development Director Eric Landon regarding the Holder Industrial Park grant materials. That record states Citrus County submitted a **$2,800,000** request to the **United States Economic Development Administration's Disaster Supplemental Grant** for construction of a wastewater line to serve Holder Industrial Park, with **$700,000** in local matching funds. It describes Holder Industrial Park as a **551-acre industrial zoned site** expected to create **3,800 jobs** according to Duke Energy IMPLAN economic modeling. It also **states that** many of those jobs would include high-skill, high-wage occupations in **NAICS Codes 31-33 Manufacturing, 49 Warehousing, and 81 Industrial Services**, with an estimated **$367,000,000** annual increase in Citrus County GDP upon buildout. [S8]

That matters because the current 2025/2026 applications are no longer limited to the 551/557-acre industrial park described in the grant materials. The current application materials seek to expand HIP to roughly **1,348.6 to 1,356+ acres**, add **information processing, data center utilities, and data storage**, and identify **Data Centers and Cloud Infrastructure** as a primary target sector. [S2, S3]

That creates a serious public-purpose question.

The County should explain whether the wastewater infrastructure funded for a 551-acre industrial/jobs project is now being used to support a much larger industrial/data-center-capable framework. The issue is not whether sewer infrastructure is useful. Sewer infrastructure can serve a public purpose. The issue is whether the project being advanced now still matches the public benefit, job-creation, acreage, and industrial-use representations tied to the grant materials.

This is especially important because Florida Statute §288.101 states that the Florida Job Growth Grant Fund is intended to promote economic opportunity by improving public infrastructure and enhancing workforce training, and that the fund "may not be used for the exclusive benefit of any single company, corporation, or business entity." It also defines public infrastructure as

infrastructure that is owned by the public and is for public use or predominantly benefits the public. [S7]

The County should put a clear answer in the record before approving these applications.

If the public was told the wastewater line would support a 551-acre industrial park creating thousands of jobs in manufacturing, warehousing, and industrial services, then the County should not quietly shift that public infrastructure story into support for a 1,300-plus-acre data-center-capable entitlement package without explaining how the public purpose still holds.

If public money helped make this site "shovel-ready," the public deserves to know what it is being made shovel-ready for.

This issue could invite additional state or federal review if the final project no longer matches the public-purpose representations tied to the infrastructure funding.

If the new application for the HIP is approved, it will need the attention of the U.S. Economic Development Administration Office of Inspector General (EDA OIG), FDEP and EPA Region 4, the Department of Financial Services, SWFWMD, and the Office of the Governor to determine if an audit is appropriate.

B. Statutory grant language

Florida Statute §288.101 matters because it explains what this type of public infrastructure funding is supposed to do. [S7]

If public infrastructure money was tied to making Holder Industrial Park shovel-ready, the County should be able to clearly explain how the current project still serves a broad public purpose. That explanation should include whether the infrastructure benefits the public and the region as a whole, or whether it is being used in practice to support a specific private industrial recruitment target or customer.

It requires the County to ask the right question before approval.

Public infrastructure money should serve the public, not quietly become a launchpad for one future private mega-user. [S7, S8]

IX. Environmental, Watershed, and Site-Condition Issues

A. Prior mining, soil, floodplain, and open space

The record confirms that the proposed expansion area includes former mining and altered land conditions. The applicant described former mine pits, spoil banks, and floodplain areas within the expansion area. The development area exhibit also shows existing **flood plains** mostly associated with former mining pits. [S2, S3, S9]

For the 798.6-acre expansion area, the applicant represented that some of those mined/floodplain areas would likely remain as open space or tree preservation because they are not suitable for development. The development area exhibit identifies approximately 298.6 acres, or 37.5%, as proposed open space associated with mining pits, spoil banks, floodplain, and buffers. It also identifies approximately 500 acres, or 62.5%, as approximate development area. [S2, S3, S9]

That **500-acre** figure should be understood correctly. It refers to the approximate developable area within the proposed 798.6-acre expansion area. It should not be confused with the existing 557.4-acre HIP area or with separate data-center-use mapping that appears to evaluate a larger combined area using both the existing HIP side and the expansion side.

- 557.4 acres = existing/current Holder Industrial Park. The applicant PowerPoint labels the current HIP as 557.4 acres. [S3]
- 798.6 acres = proposed HIP expansion. The same applicant PowerPoint labels the proposed expansion as 798.6 acres and the proposed total as 1,356 acres +/-; the March and June agenda memoranda use the same basic figures. [S3]
- 500 acres = approximate development area within the 798.6-acre expansion area, after accounting for mine pits, floodplain, open space, buffers, and shape constraints. The applicant's March presentation discusses remnant mine pits/spoil banks, floodplain mostly associated with historic mining pits, and a "Development Areas" slide showing 37.5% open space. [S9], also [S3]
- 777 acres = a May 12 revised application / Exhibit C "DATA CENTER USE AREA" figure identified in the intervenor material. That material states Deltona's May 12 revised application added policies and Exhibit C to designate a 777-acre "DATA CENTER USE AREA." [S3]

The key question is not whether open space is shown on a map. The key question is whether that open space is legally binding in the adopted Subarea Plan, whether it protects the areas closest to existing homes, and whether the remaining developable industrial area still creates major intensity next to residential land.

The applicant is not giving the public a huge preservation gift. A lot of the "preservation" appears to be land that is already difficult to build on.

Their map shows the problem. They carved around the land that is hard to build on, then left a massive data-center pad in the middle. That is not proof this is safe. It is proof that this needs a real impact analysis before the County gives them the entitlement.

Even accepting the applicant's open-space representation, the County is still being asked to approve hundreds of developable acres for Industrial / Heavy Industrial use. That is a major land-use decision, and it still requires full review of compatibility, stormwater, traffic, water, sewer, power demand, emergency response, noise, lighting, and environmental impacts before approval.

B. Watershed context

Karst? Sinkholes? Aquifer Protection? Stormwater?

Karst areas are not a side issue in Citrus County. It is one of the main reasons this application needs a much deeper review before approval.

Citrus County's Comprehensive Plan states that the County shall protect springs by prohibiting increases in allowed land-use intensity at the Generalized Future Land Use level within a Karst Sensitive Area without a hydrogeological analysis addressing impacts to groundwater resources. That analysis must be performed by a professional geologist or professional engineer licensed in Florida. The Plan defines a Karst Sensitive Area as an area where limestone lies within five feet of natural grade. [S5]

The same Comprehensive Plan section also requires a detailed geological/geotechnical investigation when an existing sinkhole or karst-sensitive feature is present on a proposed development site. It also states that certain uses and activities, including stormwater structures other than swales, utility structures, buildings, impervious surfaces, septic systems, drain fields, solid waste disposal areas, or chemical storage, shall not be located over or adjacent to an existing sinkhole unless a qualified professional determines the area is safe and there is no subsurface connection that may cause contamination or damage to groundwater. [S5]

That matters here because this application is not asking for a minor increase in intensity. It asks to move hundreds of acres into an Industrial / Heavy Industrial framework over karst area.

The HIP Subarea Plan itself also recognizes the issue. Policy 17.36.8 says the stormwater management system for Holder Industrial Park must be designed in accordance with all SWFWMD and Citrus County Land Use Plan Karst Sensitive Area policies. It also requires Best Management Practices from "Protecting Florida Springs - Land Use Planning Strategies and Best Management Practices," encourages low-impact development near floodplains or wetlands, and calls for drainage to be phased by onsite basin with the intent of an integrated sitewide drainage plan. [S3, S5]

So, where is the hydrogeological analysis for this larger 2025/2026 entitlement request?

Sinkhole risk also needs to be evaluated as part of the groundwater and karst review. This is not just a surface-drainage issue. Florida DEP identifies drought, construction terra-forming, blasting, heavy ground loading, heavy rainfall, and heavy groundwater pumping as probable triggering mechanisms for sinkhole collapse. DEP also explains that private residential wells are typically not enough to lower the water table enough to cause sinkholes, which is exactly why large-scale groundwater demand, construction activity, heavy infrastructure, and altered drainage deserve closer review in a project of this size. [S15]

This matters here because the proposed HIP expansion is being considered in karst-sensitive Citrus County, on land with former mine pits, spoil banks, floodplain areas, altered site conditions, and proposed Industrial / Heavy Industrial intensity. If future development changes groundwater levels, concentrates stormwater, adds major impervious surface, places heavy structures or utility infrastructure over vulnerable ground, or increases water withdrawals, the County needs to understand those risks before approving the entitlement. [S3, S5, S9, S15]

The concern is not that every project automatically causes sinkholes. The concern is that sinkhole-triggering conditions are already recognized by Florida DEP, and the County should not approve a 1,300-plus-acre industrial framework without a site-specific karst, sinkhole, groundwater, stormwater, and geotechnical review. [S5, S15]

USGS has also documented a real Florida example showing why groundwater levels matter. During the January 2010 freeze event in the Dover area of Florida, groundwater levels dropped to record-setting lows as water was pumped for freeze protection, and more than 110 sinkholes formed, damaging homes, roads, and cultivated areas. That example does not mean the same thing will happen here, but it shows why large changes in groundwater conditions should not be brushed aside. [S15]

Before approval, the County should require a professional analysis addressing sinkhole susceptibility, groundwater-level impacts, stormwater routing, mine-pit conditions, karst features, heavy-load areas, utility corridors, data-center-capable infrastructure, and off-site risks to nearby homes and roads. In Citrus County, sinkhole and groundwater risk should be answered before land-use intensity is increased, not after. [S3, S5, S9, S15]

If the County is being asked to approve a larger Industrial / Heavy Industrial framework in a karst-sensitive county, then the public should see more than general promises that stormwater will be handled later. The public should see a site-specific analysis of karst features, sinkhole risk, groundwater vulnerability, aquifer recharge, stormwater routing, floodplain interaction,

contamination pathways, and whether heavy industrial/data-center-capable development is appropriate on this land.

This is especially important because the applicant's own materials describe former mine pits, spoil banks, floodplain areas, and altered land conditions within the expansion area. **Those conditions may reduce buildability in some areas, but they do not eliminate groundwater and stormwater concerns.** They make the need for careful review stronger.

The County should not approve a major industrial entitlement first and then wait until later permitting to find out whether the land can safely handle the stormwater, impervious surface, utility infrastructure, and intensity being authorized.

In karst country, what goes on the land can quickly become a groundwater issue. The County should require the groundwater answers before it grants land-use entitlement.

The Rainbow River Watershed map provides important regional environmental context, but it should be used carefully. The map shows the Rainbow River, the Withlacoochee River, the watershed boundary, SWFWMD acquired parcels, and SWIM Plan technical evaluations involving water quality, sediment, nutrient budget, nitrate effects on Lyngbya, and habitat restoration. [S11]

That tells us this region is environmentally **sensitive,** and that water quality, nutrients, sediment, and spring/river health are already recognized planning concerns.

The County should require a parcel-specific watershed, karst, stormwater, groundwater, and aquifer-impact review before approving a major Industrial / Heavy Industrial expansion in this area.

Also something that should be discussed is the SWFWMD / Environmental Resource Permitting Concerns...

Florida's stormwater and Environmental Resource Permitting framework reinforces why this application should not be approved before the County has a complete site-specific water, stormwater, wetlands, floodplain, and environmental record.

Florida Statute §403.814(12) provides a limited general permit for certain small stormwater management systems serving a total project area of up to 10 acres, with less than 2 acres of impervious surface. To qualify, the project must not impact wetlands or other surface waters, must not be conducted in, on, or over wetlands or other surface waters, and must not be part of a larger common plan, development, or sale. The project also must not cause adverse water quantity or flooding impacts to receiving waters and adjacent lands, adverse impacts to existing

surface-water storage and conveyance capabilities, violations of state water-quality standards, or adverse impacts to surface-water or groundwater levels or flows. [S14]

That small-project standard matters by comparison. If a small project under 10 acres and under 2 acres of impervious surface must certify no adverse stormwater, wetland, water-quality, flooding, or water-resource impacts, then Citrus County should not approve a 1,300-plus-acre Industrial / Heavy Industrial entitlement framework without requiring a much more complete site-specific record.

The Holder Industrial Park expansion is not a small isolated stormwater project. It is part of a much larger common plan of development. It involves hundreds of acres, former mine pits, spoil banks, floodplain areas, proposed open space, approximate development areas, potential data-center-capable uses, utility infrastructure, roads, substations, and major impervious-surface questions. A project of this scale should be evaluated against the broader Environmental Resource Permitting framework, not treated as if later permitting is a substitute for land-use compatibility review.

The Environmental Resource Permit program regulates activities involving alteration of surface-water flows, including upland construction that generates stormwater runoff, as well as dredging and filling in wetlands and other surface waters. For individual or conceptual ERP review, applicants must provide reasonable assurance that the regulated activity will not adversely impact wetland and surface-water functions, fish and wildlife habitat, water quality, surface-water storage and conveyance, public health and safety, flooding conditions, or the property of others. [S14]

Those are not minor engineering details. They go directly to whether this land-use change is suitable at this location.

Before recommending approval, the PDC and BOCC should require clear answers on whether the proposed expanded HIP framework can meet SWFWMD / ERP standards for stormwater, floodplain function, wetlands, surface waters, fish and wildlife, groundwater, karst conditions, water quality, public health, safety, welfare, and off-site flooding. If the applicant cannot show that the larger entitlement framework can meet those standards, then the County should not approve the entitlement first and leave the public to hope the permitting problems are solved later.

C. Water capacity

The applicant relies heavily on closed-loop liquid cooling with dry coolers for data centers. That sounds reassuring at first, but it does not answer the full water question.

The record still lacks complete operational water analysis. Board questions exposed unresolved details, including evaporation rates at a 20-megawatt scale. **There are no** demonstrated long-term potable water capacity **disclosures**. [S3]

That matters because "closed loop" does not mean "no water impact." It does not answer the source of water, the total volume needed, the initial fill requirements, makeup water, emergency conditions, wastewater discharge, reclaimed/reuse availability, permitting limits, or what happens if a future operator changes technology later on when and if they decide it's too expensive to continue.

The County should not accept a general cooling-method promise as a substitute for a binding water plan.

Before approval, the County should require enforceable limits on water source, water volume, cooling method, reclaimed or reuse water availability, wastewater discharge, consumptive use permitting, and **binding contracts to prevent** future technology changes.

If the applicant is asking the County to approve data-center-capable entitlements, then the applicant should be required to show the full water **impacts now.** Not later. Not at some future permit stage. Now, before the land-use entitlement is granted.

The applicant's water-consumption comparison does not answer the real question.

The June 18 packet includes an applicant water-consumption exhibit comparing one "typical, conceptual data center" to existing residential land-use entitlement. The data center example is based on one 350,000-square-foot building plus a 50,000-square-foot office. The exhibit states that this single conceptual data center would use 3,607,500 gallons annually. The residential comparison uses 1,071 homes at 312.5 gallons per day per unit, for a total annual residential consumption figure of 122,160,937 gallons per year. [S3]

If you need a reminder of how an actual buildout of the site would likely use 50million gallons annually more than a residential buildout go to the Executive Summary of this document.

That comparison is being used to make the data center look small.

But the comparison is incomplete.

The applicant is not asking the County to approve one clearly defined 350,000-square-foot data center building. The applicant's own June 18 materials show a Data Center Use Plan and Standards section, a Data Center Use Area, 500-foot buffers and setbacks, 50% open space and preservation, and 50% of land for data center use. [S3]

So the real question is not whether one conceptual building uses less water than a residential buildout.

The real question is: how much water could the entire data-center-capable framework use at maximum buildout?

That question is not answered.

The applicant's exhibit gives the County a single-building example, but the Subarea Plan request creates a broader land-use framework. Those are not the same thing.

If the County approves the framework, future development may not be limited to one building unless the County places that limitation directly into the adopted Subarea Plan.

The County should not accept a one-building water comparison as proof that the entire data-center-capable entitlement is safe for Citrus County's water resources.

At minimum, before approval, the applicant should be required to disclose:

The maximum number of data center buildings allowed;

The maximum total square footage allowed;

The maximum annual and daily water demand for the entire data-center-capable area;

The source of all water;

Whether potable water, reclaimed water, groundwater, or another source would be used;

Whether evaporative, hybrid, dry, closed-loop, or other cooling systems would be allowed;

Whether a future operator could change cooling technology later;

Whether the County will impose a binding water-use cap;

Whether water limits apply to one building or the entire HIP framework;

What happens if future water demand exceeds the assumptions shown in the applicant's exhibit.

The applicant's water exhibit may be useful as an example, but it is not a full water analysis.

It does not prove capacity.

It does not prove compatibility.

It does not prove maximum impact.

It does not prove that future water use will remain low.

The County should not approve a 1,300-plus-acre Heavy Industrial / data-center-capable framework based on one conceptual water comparison.

If the applicant wants approval for a campus-scale framework, then the applicant needs to provide campus-scale water numbers.

x. Compatibility With Residential Areas

Residential adjacency is confirmed by the record.

The applicant stated that **"39 parcels adjoin the expansion area"**, including mobile homes, single-family homes, and vacant parcels. The June 18 packet also includes an adjacent residential lots exhibit, which confirms that residential compatibility remained an active issue in the updated record. [S3]

That matters because people already live next to this proposed expansion area. Vacant residential parcels also matter because they still carry future residential rights, property value, and expectations of compatibility.

This is not an industrial site surrounded only by other industrial uses. Compatibility cannot be reduced to a buffer.

The Comprehensive Plan and LDC require the County to consider the full land-use relationship, including intensity, density, buffering, drainage, landscaping, parking, access, lighting, signage, potable water, natural resources, stormwater, traffic flow, and nuisance impacts. [S4, S5]

A 100-foot buffer may be better than a 75-foot buffer, but it does not answer the whole compatibility question.

The County should decide whether 100 feet is actually enough for the type of uses being opened up here, including potential continuous cooling equipment, backup generators, substations, energy storage, lighting, security fencing, truck traffic, construction activity, and emergency access.

A row of trees is not a compatibility study.

Before approval, the County should require a real compatibility analysis that looks at what nearby residents could actually experience on the ground, not just what looks acceptable on a map.

Something else that should be addressed by the County:

If Deltona or related entities have been purchasing vacant lots or homes around the project area.

The County should require that ownership pattern to be clearly disclosed in the public record. That includes parcel numbers, owner names, purchase dates, sale prices, and **whether those parcels are being used to reduce apparent residential adjacency, create buffers, assemble land for future industrial use, or influence the compatibility analysis.**

According to Citrus County Property Appraiser parcel records, the following parcels have been acquired recently by Deltona Corporation near the HIP area. [S13]:

Parcel ID	Address	Acreage	Purchase Date	Book/Page	Purchase Price
19E17S32 11400	7073 N LECANTO HWY, HERNANDO, 34442	8.47	03/25/2026	3654/0343	$660,000
19E17S32 11100	7088 N LECANTO HWY, HERNANDO, 34442	18.95	03/12/2026	3650/1607	$501,800 (listed $850,000 03/15/2022)
19E18S10 13300	0 N TRAM RD, HERNANDO, 34442	11.82	01/10/2023 6-TO/FROM FED/STATE/LOCAL GOVT/TIITF	3351/0547	$75,000

If surrounding residential parcels are being acquired by the applicant, then the County should not use those acquisitions to minimize the impact on the remaining residents. The people who still live there should not become easier to overlook just because other lots around them were bought up or remain vacant.

XI. Transportation, Energy, and Large-Load Infrastructure

The 2026 proposal also changes the transportation and utility picture.

The materials describe a **third** access point on County Road 491, creating a total of three access points. They also reference right-of-way dedication along county and state roads and shared stormwater drainage improvements. [S2, S3]

New access points, right-of-way dedication, and future roadway planning are signs of a larger industrial footprint and more intense long-term use. Roadway widening and industrial access changes can alter rural character, increase truck movement, change safety conditions, and lock in future industrial intensity before the final buildout is known.

The power issue is just as important.

The applicant materials and opposition record identify dedicated substations, major power delivery infrastructure, transmission upgrades, high-tech industrial operations, utility-intensive uses, and energy infrastructure as practical implications of this proposal. The June 18 packet also includes a Duke Energy letter of support. [S3]

That should raise serious questions before approval.

If this project is being positioned for data centers or other large-load industrial users, the County should require more than general assurances. It should require enforceable protections against cost-shifting, ratepayer impacts, infrastructure overbuilding, and later expansion beyond what was represented during approval.

Residents should not be left paying the indirect price for private industrial power demand.

The County needs to know who pays for the roads, who pays for the power infrastructure, who absorbs the risk of overbuilding, and what happens if future demand grows beyond what was presented in the public hearing record.

This is not just about whether the site can attract a large user. It is about whether the public is being asked to carry the burden of making the site attractive.

Backup Power and Water-Plan Disclosure Must Not Be Removed or Deferred

The June 18 packet raises a serious disclosure problem in the proposed Subarea Plan redline.

The packet shows language marked "PROPOSED FOR REMOVAL BY APPLICANT" involving a backup power plan. The removed language would have required a description of the fuel source and expected usage of any standby, backup, or temporary power generation systems, with the backup power plan complying with applicable local, state, and federal permitting standards. [S3]

That should not be removed.

For a data center capable industrial framework, backup power is not a minor detail. Backup power can involve large generators, turbines, fuel storage, testing schedules, emergency operation, emissions, noise, fire risk, and public-safety concerns. Nearby residents have a right to know what kind of backup power could be allowed before the County approves the entitlement.

The same redline materials also show an entire water-usage section marked for removal by applicant. That removed section would have required a water supply plan outlining proposed water usage and expected withdrawals. It also included confirmation from the water management

district or FDEP regarding projected withdrawals, use of reclaimed water when available, water-conservation planning for high-flow users, water meters at wellheads, and environmentally sound disposal of cooling water and wastewater. [S3]

That should not be removed either.

Those are not unnecessary burdens. Those are exactly the types of disclosures the County should require before approving a data-center-capable Heavy Industrial framework.

If the applicant is asking the County to approve a land-use framework that could support large-load industrial or data-center uses, then the applicant should not be removing backup-power disclosure and water-usage planning from the record. The County should require more disclosure, not less.

Before approval, the applicant should provide a full backup-power plan, full water-supply plan, full wastewater and cooling-water plan, full generator/fuel/emissions/noise plan, full electrical-load disclosure, and full explanation of how future operators will be prevented from changing the project's water, power, and cooling assumptions after entitlement is granted.

If those disclosures are not available now, **the application is not ready for approval.**

XII. Major Differences Between 2019, March 2026, and June 18, 2026

Issue	2019 Approval	March 5, 2026 Proposal	June 18, 2026 Packet
Application identity	CPA-19-01 / CPA-AA 19-01 and 19-02	CPA-2025-00012 and CPA-AA-2025-00013	Same applications continued
Acreage	Approximately 555/557 acres	Proposed total approximately 1,348.6 acres; +798.6 acres	Agenda says approximately 1,356 total; redline says 1,370.6 MOL
PSA	Expanded for original HIP	New PSA expansion to cover new application area	Same, with June 18 hearing

Land-use conversion	Original HIP Industrial/Subarea framework	Convert AGR/CON/LDR/RUR/TCU to IND Heavy Industrial	Same, refined with exhibits and redline
Data centers	Not clearly part of 2019 approval	Added data center/data storage/data center utilities language	Data center use area maps and water materials included
End user	Not identified in current record	No identified end user	Still no identified end user in March minutes included in June packet
Buffer	Original HIP standards	75-foot proposed near residential, later 100-foot discussed	100-foot concession appears in record
Open space	Original framework	Former mine pits/floodplain likely open space	Development Area Exhibit shows 298.6 acres +/- open space, 500 acres +/- developable
Utilities	Original central utility/concurrency framework	Central utilities; data center cooling language	Revised subarea text, water-consumption materials, Duke letter
Transportation	Original access framework	Additional CR-491 access; total 3 access points	Roadway/right-of-way/corridor issues in updated packet
Public process risk	2019 Comp Plan process	Future uses may proceed later through permitting	Same concern, with expanded entitlement record

Source note: This comparison is based on the 2019 BOCC packet, March 5 PDC packet, June 18 PDC packet, Citrus County Comprehensive Plan, and HIP Development Area Exhibit. [S1, S2, S3, S5, S9]

XIII. Most Important Findings

Finding 1: This is not the 2019 Holder Industrial Park simply moving forward.

Finding 2: The application changes the land-use future of the area.

Finding 3: Data centers are not a rumor. They are in the applicant's own materials.

Finding 4: Citrus County does not yet have a complete data center rulebook.

Finding 5: There is no final end user, final site plan, or final impact profile.

Finding 6: The applicant is asking for entitlement certainty before the public has impact certainty.

Finding 7: The water analysis is incomplete and potentially misleading.

Finding 8: The sewer grant raises a public-purpose question.

Finding 9: Utility capacity has not been proven for the expanded framework.

Finding 10: The open-space maps do not solve the intensity problem.

Finding 11: Karst, sinkholes, stormwater, and groundwater need site-specific review.

Finding 12: Residential compatibility remains unresolved.

Finding 13: The applicant's recent acquisition of nearby parcels should be disclosed and evaluated.

Finding 14: Transportation and power infrastructure point to a larger industrial intensity.

Finding 15: Other Florida counties are treating data centers as a serious land-use threat, not routine industrial use.

Finding 16: The public process risk is real.

Finding 17: The County has enough unresolved issues to deny or continue the applications.

The safest finding is simple: **The record is not ready for approval. [S1, S2, S3, S4, S5, S8, S9, S11, S13]**

XIV. Recommended Questions for PDC / BOCC that should be addressed prior to approval by the Applicant

These questions are based on unresolved issues identified in the 2019 BOCC record, March 5 and June 18 PDC packets, Citrus County LDC, Citrus County Comprehensive Plan, grant proposal materials, HIP Development Area Exhibit, Rainbow River Watershed materials, and Citrus County Property Appraiser parcel records. [S1, S2, S3, S4, S5, S8, S9, S11, S13, [S14]:

A. Scope, Acreage, and Legal Control

1. Which acreage number is legally controlling: approximately 1,348.6 acres, 1,356 acres, or 1,370.6 acres MOL?
2. Why do the acreage numbers differ between the March materials, June agenda memorandum, and June redline subarea text?
3. Is the County approving only the 798.6-acre expansion area, or is it approving a new combined HIP framework using both the existing 557.4-acre HIP and the proposed expansion together?
4. What is the legal relationship between the 500-acre approximate development area within the 798.6-acre expansion, the 557.4-acre existing HIP, and the later data-center-use-area mapping showing a larger combined data-center-capable area?
5. Is the May 12 / May 29 data-center-use-area mapping legally binding, or merely illustrative?

B. Open Space, Preservation, and Buildable Area

1. Is the May 21 / May 29 open-space exhibit legally binding in the adopted Subarea Plan, or merely illustrative?
2. Are the approximately 298.6 acres of proposed open space protected from future industrial development by enforceable language?
3. Are the preservation areas being offered as voluntary protection, or are they primarily areas that are already difficult to build on because of mine pits, spoil banks, flood plain, depressions, buffers, or other constraints?
4. Does the open space/preservation area protect the residential edges closest to existing homes, or does it mostly protect interior areas that are already constrained?
5. Can any of the mapped open-space or preservation areas be modified later by administrative approval, site-plan review, or future amendment?

C. Data Center Use and LDC Authority

1. Are data centers, data storage, information processing, data center utilities, substations, and energy storage permitted by right if this application is approved?
2. If the Citrus County LDC does not currently identify data centers as a specific use category, under what exact LDC authority would a data center be allowed?
3. Will a future data center require a public hearing, conditional use approval, BOCC approval, or only administrative site-plan/building-permit review?
4. If the County is still developing data-center-specific standards, why should data-center-capable entitlements be approved before those standards are finalized?
5. Would approval of this application create vested rights or entitlement arguments for future data center development before the County completes its data center ordinance?

D. End User, Buildout, and Public Review

1. Who is the final end user or operator?

2. If there is no final end user, what maximum buildout scenario is the County using to evaluate impacts?
3. What is the maximum square footage of data center development allowed under the proposed framework?
4. What is the maximum number of data center buildings that could be built under the proposed framework?
5. What is the maximum megawatt load contemplated or allowed?
6. What is the maximum number of backup generators, turbines, substations, battery-energy-storage systems, or related power infrastructure allowed?
7. If future users differ from the current representations, will the public get another hearing before development proceeds?

E. Water, Sewer, Reclaimed Water, and PSA

1. Was the funded wastewater line designed and sized for the original 551/557-acre HIP or for the expanded 1,300-plus-acre framework?
2. Was the wastewater infrastructure designed around manufacturing, warehousing, and industrial services, or data-center-scale utility demand?
3. Is wastewater treatment plant capacity currently available for the full proposed buildout?
4. Is potable water capacity currently available for the full proposed buildout?
5. Is reclaimed water capacity currently available, and if so, from what source, in what amount, under what agreement, and with what reliability?
6. Does expanding the Planned Service Area create future County service obligations, capital-planning obligations, utility expectations, or risks to existing customers?
7. What is the source of initial and ongoing water for data center cooling, office use, fire protection, landscaping, construction, cleaning, and emergency conditions?
8. What wastewater, blowdown, discharge, or treatment streams are expected?
9. Is there a binding prohibition on evaporative cooling, hybrid cooling, or future conversion away from dry-cooler/closed-loop systems?
10. What enforceable water-use cap applies to the entire site, not just one conceptual 350,000-square-foot data center building?
11. If the applicant's water comparison is based on one data center building, what is the water demand under the maximum data-center-campus buildout shown in the data-center-use-area mapping?

F. Karst, Stormwater, Floodplain, and Environmental Review

1. Has a hydrogeological analysis been completed for the expanded Industrial / Heavy Industrial entitlement area?
2. Has the County determined whether any part of the site is within a Karst Sensitive Area as defined by the Comprehensive Plan?
3. Have sinkholes, karst features, mine pits, spoil banks, depressions, floodplain areas, and groundwater contamination pathways been mapped and evaluated?

4. How will stormwater be managed across the full expanded site, including the data-center-capable areas?
5. Will stormwater structures, impervious surfaces, utility structures, chemical storage, generators, substations, or battery systems be located over or near sinkholes, karst features, mine pits, or other vulnerable areas?
6. Has a parcel-specific watershed, aquifer, groundwater, and stormwater-impact analysis been completed?
7. Has an environmental assessment or mitigation plan been completed for the expanded entitlement area? If not, why should the entitlement be granted before that review?

G. Residential Compatibility and Public Health

1. Is a 100-foot buffer sufficient for Heavy Industrial, data-center-capable, utility-intensive, continuous-operation uses next to residential parcels?
2. What enforceable noise limits apply, including low-frequency, tonal, and continuous mechanical noise?
3. What enforceable lighting standards apply to prevent glare, skyglow, and security-light impacts on nearby homes?
4. What air-emission limits apply to backup generators, turbines, diesel equipment, fire pumps, or other onsite/co-located generation?
5. How many homes, mobile homes, vacant residential parcels, schools, and sensitive receptors are within one mile, two miles, and three miles of the proposed industrial/data-center-capable area?
6. Will the County evaluate compatibility based only on currently occupied homes, or also on vacant residential parcels with future residential rights?
7. If Deltona or related entities have purchased nearby residential or vacant parcels, has that ownership pattern been disclosed and evaluated before relying on vacancy or adjacency statistics?

H. Transportation, Roads, and Emergency Services

1. Why is a third access point now needed if this is merely a continuation of the 2019 framework?
2. What truck traffic, construction traffic, employee traffic, emergency traffic, and equipment-delivery traffic are expected under the maximum buildout scenario?
3. What road widening, right-of-way dedication, intersection improvements, turn lanes, signalization, or safety improvements are required?
4. Who pays for those improvements?
5. Will industrial access changes alter nearby residential roads, rural character, safety, drainage, or emergency response?
6. Has emergency-service capacity been evaluated for fires, battery incidents, generator incidents, hazardous materials, confined-space issues, cyber/physical security incidents, and large industrial electrical infrastructure?

I. Energy, Grid, and Cost-Shifting

1. What specific power demand is being planned for this site?
2. How many substations, transmission upgrades, battery-energy-storage systems, generators, or related electrical facilities could be allowed?
3. Are substations and energy storage allowed in all tiers under the proposed language?
4. Who pays for transmission upgrades, substations, roadway impacts, utility extensions, and other infrastructure needed to serve a large-load customer?
5. What protections exist to prevent cost-shifting to existing residents, ratepayers, taxpayers, or future County budgets?
6. What happens if infrastructure is overbuilt for a private user that later does not materialize, downsizes, or leaves?

J. Grant, Public Purpose, and Consistency

1. Has Florida Commerce, the U.S. Economic Development Administration, or the grant administrator reviewed whether the current expanded/data-center-capable proposal remains consistent with the grant representations?
2. Was the grant-funded wastewater infrastructure intended to support the original 551/557-acre industrial park or the later 1,300-plus-acre expansion framework?
3. Does the current proposal still match the public-purpose story tied to manufacturing, warehousing, industrial services, job creation, and regional economic diversification?
4. If the buildout becomes data-center-dominated, how does the County ensure the infrastructure does not primarily benefit one private mega-user?
5. How will the County ensure compliance with Florida Statute §288.101's restriction against use of Job Growth Grant Fund money for the exclusive benefit of a single company, corporation, or business entity? [S7]
6. Has the County evaluated whether approval could create clawback, audit, or grant-compliance risks?

K. Comprehensive Plan Consistency

1. Does Policy 17.2.11 apply to any of the subject parcels?
2. If Policy 17.2.11 applies, how can additional high-intensity non-residential land use or new/expanded IND designation be found consistent with the Comprehensive Plan?
3. How does the proposal comply with Goal 17's requirement to enhance quality of life, protect the environment, create favorable economic conditions, and eliminate incompatible land uses, hazards, and nuisances?
4. How does the proposal comply with Objective 17.2's requirement that PSA development coordinate with topography, soil types, demonstrated need, environmental suitability, infrastructure availability, and community values?
5. How does the proposal comply with the LDC's stated purpose of protecting landowners from adverse impacts of adjoining development and protecting water resources, wildlife habitat, fisheries, and threatened or endangered species?

L. Additional SWFWMD / ERP Questions

1. Has the applicant obtained, applied for, or requested a conceptual Environmental Resource Permit from SWFWMD for the expanded HIP framework?
2. Has SWFWMD reviewed the full 1,300-plus-acre Industrial / Heavy Industrial framework, or only smaller pieces of infrastructure?
3. Does the proposed expansion qualify as part of a larger common plan of development for ERP purposes?
4. Has the applicant provided reasonable assurance that the expanded framework will not cause adverse flooding to on-site or off-site property?
5. Has the applicant provided reasonable assurance that the expanded framework will not adversely affect surface-water storage, conveyance, groundwater levels, surface-water flows, wetlands, fish, wildlife, listed species, or habitat?
6. Has a site-specific wetland delineation been completed for the entire expanded HIP area?
7. Has a site-specific stormwater model been completed for the entire expanded HIP area, including the existing HIP, the 798.6-acre expansion, former mine pits, spoil banks, floodplain areas, proposed open space, and potential data-center-capable development areas?
8. Has the County received written confirmation from SWFWMD that the proposed land-use framework appears permittable at the intensity being requested?
9. If SWFWMD permitting will occur later, what prevents the County from approving an entitlement framework that later requires major redesign, greater impacts, or infrastructure changes that were never reviewed publicly during the land-use hearing?
10. Should the County require a conceptual ERP, wetland delineation, stormwater model, floodplain analysis, and karst/groundwater review before recommending approval?

M. Final Decision Question

1. **If these questions cannot be answered clearly, specifically, and enforceably before approval, why should the PDC recommend approval?**
2. **Why should Citrus County grant a 1,300-plus-acre Industrial / Heavy Industrial entitlement framework before the County knows the final use, final user, final infrastructure demand, final environmental impact, final utility burden, and final compatibility impact?**
3. **Would the more responsible action be denial, continuation, or requiring a full revised application after Citrus County adopts data-center-specific standards?**

xv. Conclusion

The record supports one clear conclusion: **this is not the 2019 Holder Industrial Park simply moving forward.**

Given the extensive research on all publicly available materials from 2017 to 2026, Citrus County should not approve the entitlement first and study the impacts later as it already did in 2019, with little follow-through on the HIP's commitments. Let the track record show.

The safer and more responsible action is to deny the applications as presented, or at minimum continue them until the County has adopted data-center-specific standards, completed a full infrastructure and environmental review, resolved the acreage discrepancies, evaluated grant consistency, and placed enforceable protections directly into the public record, and determine if they want to adopt a total ban on data centers and what that is defined as is currently being done across the State of Florida.

Citrus County is already in the process of updating its Comprehensive Plan, and that process includes citizen input, planning review, and long-term policy direction for the County's future. That matters here. A major Industrial / Heavy Industrial expansion of this size should not be rushed ahead of the very planning process that is supposed to guide future land-use decisions.

Zoning and comprehensive planning exist for a reason. They are supposed to protect the public from piecemeal land-use changes driven by individual development proposals. If the County is actively reviewing and updating its long-term growth policies, then major zoning and land-use changes should be paused until that process is complete, especially when the request involves more than 1,300 acres, Heavy Industrial designation, data-center-capable uses, utility expansion, and long-term impacts to surrounding residents and natural resources.

Changes to the Comprehensive Plan should be led by the public interest, citizen input, professional planning analysis, and the County's adopted vision. They should not be driven by a developer's need for entitlement certainty or site-selection marketing.

[S11] Rainbow River Watershed Map

Southwest Florida Water Management District / Rainbow River Watershed materials. *Rainbow River Watershed Map.* File reviewed: **Rainbow River Watershed.pdf**. Used for regional environmental context, including Rainbow River, Withlacoochee River, watershed boundary, SWFWMD acquired parcels, SWIM Plan project legend, water quality evaluations, sediment mapping, nutrient budget, nitrate effects on Lyngbya, and habitat restoration context. This source was used for regional context only and not as a parcel-specific proof of watershed location.

[S12] Lot or Parcel Information Deltona Corporation

Citrus County property/parcel record materials. *Lot or Parcel Information Deltona Corporation.pdf.* Used for parcel information, Deltona Corporation ownership, acreage, flood zone references, land-use and zoning notes, prior application history, and parcel-level context related to Holder Industrial Park.

[S13] Citrus County Property Appraiser Parcel Records

Citrus County Property Appraiser records for nearby parcels reportedly acquired by Deltona Corporation, including Parcel IDs 19E17S32 11400, 19E17S32 11100, and 19E18S10 13300. These records should be attached or verified directly before public filing.

[S14] Florida Environmental Resource Permitting / SWFWMD Standards

Florida Statutes §403.814(12); Florida DEP Environmental Resource Permitting Program materials; and SWFWMD Environmental Resource Permit materials. Used for the limited general permit standard for small stormwater systems under 10 acres and under 2 acres of impervious surface, the "not part of a larger common plan, development, or sale" limitation, and the broader ERP review issues involving stormwater, flooding, wetlands, surface waters, fish and wildlife, water quality, public health, safety, welfare, and property impacts.

[S15] Florida DEP / USGS Sinkhole and Groundwater Materials

Florida Department of Environmental Protection, Florida Geological Survey sinkhole materials, including DEP's Sinkhole FAQ; and U.S. Geological Survey materials documenting the January 2010 Dover-area sinkhole event. Used for sinkhole-triggering factors, including drought, construction terra-forming, blasting, heavy ground loading, heavy rainfall, heavy groundwater

pumping, and documented Florida sinkhole activity associated with record-low groundwater levels during heavy pumping.

[S16] Conservation Lands / Wildlife Management Context

Florida Fish and Wildlife Conservation Commission materials for Citrus Wildlife Management Area, Potts Wildlife Management Area, and Flying Eagle Wildlife Management Area; Florida Forest Service / Withlacoochee State Forest materials for Two Mile Prairie Tract / Bearhead Hammock; and Southwest Florida Water Management District materials for Potts Preserve and Flying Eagle Preserve. Used for regional conservation-land context, public ownership/management, wildlife habitat, recreation, groundwater recharge, wetland systems, floodplain function, Tsala Apopka / Withlacoochee River connections, and surrounding wildlife-management-area concerns.

[W1] Walton County Data Center Ban / Public Hearing Materials

Walton County Board of County Commissioners materials and public reporting regarding the June 9, 2026 emergency ordinance to prohibit data centers and large-load data-center-related facilities. Used for comparison showing that another Florida county treated data centers as a serious land-use category requiring local prohibition or heightened regulation. The report states that Walton County voted 5-0 to adopt a countywide data center prohibition. This reference should be verified against the final adopted Walton County ordinance and official minutes before public filing.

[W2] Jackson County Data Center Moratorium and Ban Materials

Jackson County, Florida public notice and public reporting regarding proposed moratorium and subsequent move toward a permanent ban on large-scale data centers / AI data centers. Used for comparison showing that Jackson County treated data centers and large-load customer facilities as requiring review of siting, infrastructure, environmental, public safety, and compatibility impacts. Public reporting stated that Jackson County commissioners voted on June 9, 2026 to move forward with a permanent ban, with final action expected after a later second reading. This reference should be verified against final Jackson County ordinance adoption records and official minutes before public filing.

[W3] Florida Chapter 2026-65 / SB 484 Data Center Law

State of Florida. *Chapter 2026-65, Laws of Florida / SB 484.* Used for context regarding state-level data center regulation, large-load customer definitions, and preservation of local zoning, permitting, and land-use authority. This source should be cited directly from the enrolled law or official state record if used in final filing.

Verification note: Any web-based references, county ordinance adoption dates, and property appraiser parcel records should be checked against final official records before submission, especially Walton County, Jackson County, and parcel acquisition claims.

>
> The applicant hasn't begun work or turned one shovel of dirt on the almost square mile of property that was approved several years ago therefore demonstrating no "need", or no hardship for further expansion of property. By approving additional 800-acres to the existing property there is no guarantee the 1,300 acres will be utilized for a Data Center

which I oppose. In addition approving the entire 1,300 acres to heavy industrial lends itself to abuse for other incompatible uses. One owner should not have the unyielding power to develop such a large parcel that will create many incompatible issues on our ecosystems and leave 170,666 Citrus County residences responsible for other unexpected expenses. And once approved there is no recourse to stop him.

It is my opinion that the existing Holder Industrial Park offers diversity in many job opportunities that the county has been seeking. One size does not fill all needs of the county and alleviates one person being in control of unknown uses.

I ask you and the Planning & Zoning Commission to deny the 800-acres expansion and land use designation to Heavy Industrial and utilize the existing Holder Industrial Park for what it has been approved for.

I would appreciate if you would provide the Planning Commission with a copy of this email. Please consider my concerns when deliberating these issues.

Kind regards,
Karen Esty

>
> My family moved to Quail Run back when the intersection of 41 and 491 was a four-way stop, the home of "old blinky"....now housed in the Inverness Courthouse Museum. When the plans for the Holder Industrial Park came out, I was disappointed that this corner of the county would lose its beautiful sunrises over the hills and old oaks. However, I could acknowledge that a tastefully designed and set-back industrial park would provide employment opportunities for Citrus County residents.
>
> Do not open the doorway for a data center or other heavy industry via zoning change at the Holder property. The concept of a data center, with its many unknowns (How will local residential wells and water supplies be impacted-from water withdrawals to potential flushing discharge disposal? How will light and sound pollution impact residents and wildlife? How significantly will residents' property values depreciate? How many employment opportunities will actually be created for Citrus County residents? How will the land be reclaimed once the data center becomes obsolete in approximately 10 years?) is not a fit for Citrus County.

Subject: No to the Holder zoning change please
To: stone6716s@gmail.com <stone6716s@gmail.com>

Hello,

I am writing in opposition to the proposed zoning change in Holder. That piece of property was given it's current zoning for a reason when the last comp plan was completed. We are also working on updating our comp plan. And the fact is that they took a lot of citizen input. We should halt any major zoning changes until that process has been completed. Changes to our comp plan should be led by the citizens and planners input, not led by the whims of developers.

Thank you for your consideration.

Best Regards,

Laura McKee

To Joanna L. Coutu <joanna.coutu@citruscounty.gov>

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

Dear Citrus County Commissioners,

I am writing to express my strong opposition to the proposed data center development near my home and within our community.

My primary concerns center on the enormous water consumption associated with data center operations and the potential environmental impacts that such a facility could have on Citrus County. Our county's natural resources are among its greatest assets, and they deserve careful protection. Large-scale data centers often require significant amounts of water for cooling systems, placing additional demands on local water supplies and aquifers. In a state where water resources are already under increasing pressure from growth and development, approving a project with such substantial water requirements raises serious concerns about long-term sustainability.

I am also concerned about the broader environmental consequences of this development, including increased energy consumption, habitat disruption, stormwater runoff, impacts to local wildlife, and the loss of the rural character that makes Citrus County such a desirable place to live. Once these natural resources are compromised, the effects can be difficult or impossible to reverse.

Many residents, including myself, chose to make our homes here because of the area's natural beauty, open spaces, and quality of life. A large industrial-scale facility operating around the clock is incompatible with the character of our community and could negatively affect nearby neighborhoods and property values.

I respectfully urge the Commission to reject this proposal or, at a minimum, require a comprehensive and transparent environmental review that fully evaluates the project's impacts on water resources, wildlife, ecosystems, infrastructure, and surrounding residential areas before any approval is considered.

Please prioritize the long-term health of our environment and the interests of the residents who call Citrus County home.

Thank you for your time, consideration, and service to our community.

Sincerely,

Deanna Marino

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Amy Nevitt

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Danny Buchanan

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, aveana leon

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Penny Schroeder

A Proposal to Create an Incompatible Use Where NONE Exist

Comments and concerns regarding this proposal
in response to the June 18 meeting notice

Dear Commissioner

I cannot attend the meetings regarding CPA-20225-00012 and CPA/AA-2025-00013 Attorney Sidney F Ansbacher for the Deltona Corporation.

I received the notices and have compiled concerns and comments and hope that you will consider them with your review.

Deltona Corporation, which according to their own website description is a "new construction and multi-family home builder", has purchased hundreds of residential lots, but proposes to combine them into a huge plot, and to change the use to HEAVY INDUSTRIAL DISTRICT (IND).
A copy of the chart of types of land uses permitted within a HEAVY INDUSTRIAL DISTRICT is attached, but some of those permitted uses are Landfill, Crematorium, Junkyard, Hazardous Material Facilities, Slaughterhouse, Wastewater Treatment Facility, Solid Waste Haulers Facilities.

I am an adjacent single family homeowner and am speaking for myself, but I will use the term "we" in some cases because I know that many of the area residents share the same or closely similar opinions.

I object. We object.

This is not an attack on Deltona Corporation or their agents. They are in business to make money, to profit. Making a profit is not offensive.

My comments and citations of the Land Development Code are not intended to offend any of the Citrus Board of County Commissioners, County officials or PDC members, or anyone.
I want the ultimate deciders to favor me, to favor us, the residents, the **citizens**, the local community by ultimately absolutely rejecting this proposal unequivocally.

Land Development Code
CHAPTER ONE GENERAL PROVISIONS
1300. PURPOSE AND INTENT
The primary purpose of the LDC is implementation of the Comprehensive Plan, as adopted pursuant to Chapter 163, Part II, Florida Statutes. The Citrus County Board of County Commissioners (BCC) deems it necessary to adopt the LDC for the following purposes:
A. Guiding and accomplishing coordinated, adjusted, and **harmonious development** in accordance with existing and future needs of the County;

Comment: this is not coordinated, adjusted or **harmonious development**.

General Future Land Use Plan (GFLUM)
Chapter 10 Land Use
GOALS, OBJECTIVES, AND POLICIES
GOAL #17 - The Future Land Use Plan is intended to **enhance the quality of life of the citizens** of Citrus County through: provisions for adequate housing, services, and facilities; protection of the environment; creation of **favorable economic conditions**; and the **elimination of incompatible land uses, hazards, and nuisances**.

Deltona Corporation, a home building company located in Ocala (Marion County) is not a **citizen**. They are here, temporarily, to make a profit.

We, the homeowners, who have lived here and paid taxes for years, decades and generations are the **citizens** to be protected. We are the stakeholders. We are the community.

A key foundation of the Land Use Plan is to eliminate incompatible land uses. The goal is to eliminate incompatible land uses, not to create them.

We have residential uses all around. The proposed plot is currently zoned as a variety of Residential use lots. All Residential – all compatible.
Heavy Industrial District – Not Compatible.
In fact it is the most incompatible use compared to residential uses.

The proposal is to take a residential lot, next to my home, where a home could be built, and convert it to a lot that could have a slaughterhouse, or a landfill (a dump), or a crematorium where the fumes and smell of burning corpses are exhausted, or many more equally repulsive uses.
The whole plot is large enough to contain all of these uses and more. Look at the Industrial Use chart and all of those most anti-residential uses can all be located on this huge plot.

My opinion is that this process should end right now. The panel must vote NO and reject this project without further adieu. No need to waste time exploring such a horrific proposal.

Growth and Development

excerpts: from Chapter 10 of the Future Land Use Element

Policy 17.1.1 protection of potable water sources.

Policy 17.1.6 environmental and water resource protection,

Policy 17.2.6 The County will ensure that the future land use plan provides for sufficient potable water supply and service as detailed in the 10 year Water Supply Facilities Work Plan.

We are just escaping a very severe drought. Industrial uses will not enhance our water resources.

Policy 17.2.8 The County shall utilize land use techniques and development standards to achieve a functional and compatible land use framework which reduces incompatible land uses.

Policy 17.2.9The County LDC shall contain standards which will protect potable water wellfields and prime recharge areas within the County from the encroachment of incompatible land uses.

All of the current lots and all of the surrounding lots are Residential; all are compatible.
This change will **create an incompatible use**; the direct opposite of the intent of the Land Development Code. Let me repeat that. By approving this change you are going to **create an incompatible use** where none exists, in the middle of a huge residential area.

Misusing of the Land Development Code by such a change of use will certainly not limit the uses within the plot. The Land Development Code does not limit or prohibit those uses, but the Heavy Industrial District is a use created to allow those *counter-residential* uses.

Deltona or their agents may show pictures, maybe models to show how beautiful the site would appear when done. They may represent that they will develop only the very nicest of uses within the Industrial Use group. They may represent that there will be only schools, or a storage facility; maybe a General Office or a Fraternal Organization.

That cannot be accepted. The Use Change cannot be approved. They will be able to introduce any use after the Change is approved.
They can sell the Industrial plot to the highest bidder, and the next owner can add any or all of the worst, the most incompatible uses.

Deltona Corporation, in this venture, should be paying paid-in-full, up to date property taxes for all of those residential lots.
That is a huge expense without getting any return. That seems like a huge financial loss.
They must move the property – sell it with homes or without.

Goal # 17 above refers to <u>creation of favorable economic conditions</u>;

The instant that such a change to Heavy Industrial District is implemented, hundreds or thousands of nearby properties, properties within 2000, 3000, 4000 feet and more will immediately drop in value and valuation without ever having any means for recovery.

Homeowners and property owners will have their property **equity** *greatly devalued* and many may become unsellable.

Credit limits for a **home equity** line of credit (HELOC) are based on your home equity, which is the difference between your home's current market value and the amount you owe on your mortgage. Lenders typically allow you to borrow up to 75-85% of your home's appraised value minus your existing mortgage balance.

Credit ratings are not directly based on home equity, but having a **home equity** line of credit (HELOC) can impact your credit score through factors like credit utilization and payment history. Your credit score is primarily determined by your overall credit history, including payment history, amounts owed, length of credit history, new credit, and types of credit used.

Citizens, our residents, our neighbors will have their financial opportunities greatly reduced or eliminated just as their equity is reduced to much lower values.

Borrowing and investing will change as rapidly. Getting a loan today may very well be denied after this Use Change is made.

After the Change of Use to Heavy Industrial District, my credit limits will be reduced. My credit rating will likely be reduced.

My application for a loan to put a new roof on the house may be denied, just because of the loss of equity caused by proximity to the Heavy Industrial District.

Mothers will be telling children that they cannot buy new clothes for the coming school year.

Parents will tell their graduates that they now cannot afford to send them to college.

Some people may lose their homes.

These examples are endless.

This proposal will destroy residents finances.

Our citizens, our residents, our neighbors absolutely will suffer damages.

Deltona Corporation, on the other hand, cannot lose. Deltona cannot suffer any damages.

Deltona can try to proceed to make a quick buck with the proposed change or
at worst, they can do nothing but comply with the current Residential use designations in place, and build homes for profit.
Deltona Corporation, located in Marion County, has no risk by vying for this horrible venture.

As a side note we object to any other change of use, even within the existing Residential Use categories.
We object to any variances, any conditional exceptions or similar forms of non-compliance, most particularly those that would permit higher residential density.

I do not want to have a landfill, a septic treatment plant, a crematorium or a fiberglass manufacturer, or any other Heavy Industrial use operating less than 200 feet from where I live, where I eat, where I sleep .
I vigorously object to that.
I don't believe any any sane person finds that to be acceptable.

I was disappointed to learn that this proposal was not defeated after the first hearing.

I'd read that the county very properly denied similar proposals in other areas, and I was heartened by those decisions.

I'm guessing that this particular plot, this site has less area population so that there might be less resistance. There might be fewer people to object. It is a path of lesser resistance.

That does not make it ok.

Save Deltona time and money and tell them no.
Let them get to profiting by building homes within the current residential usages.

Of course, Land Use Changes are permitted and encouraged in the right circumstances.

Industrial

Objective 17.7 The County shall provide for a range of industrial densities and uses in the Future Land Use Plan and County LDC which **minimizes land use conflicts** and environmental problems within the County.

Changes of Use are permitted and encouraged with limitations, but are not automatic, not guaranteed and definitely should not **create or increase land use conflicts**.

Thank you for your time and attention to these matters.

Steve Frame
Oakwood Point

My Personal Experience

I lived 100 miles away. I spent many months researching over the internet, actually a couple of years.

I selected this area because it is beautiful and I made lists of interesting properties in this area.

I drove here, lodged myself at the Quality Inn and the Holiday Inn for two or three nights on several different occasions.

I drove to the homes I was interested in. I drove around the areas. I explored them in the daytime, and then I returned at night to see what the experience would be to live there.

I wanted to be sure that my next home would not be close to a landfill, not close to a power generating station, not a nuclear plant, not high tension lines, not next to a tavern, not next to a school (no offense to schools, but they have messy traffic patterns and can be noisy).

I expended great time, expense and effort just to be far away from those Heavy Industrial uses.

I found and acquired a quiet, peaceful location to spend what are supposed to be my golden years.

I plan to grow a garden, to grow fruit trees, to improve the property.

This proposal has frozen my efforts. Investment in a property that will be spoiled by this change of use is a not advantageous.

To consider that the worst uses could be imposed right next to me, on the other side of my property line is incredible.

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Jacqueline Tomkins

At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Luna Blackwell

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, craig shouse

Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Patricia Hughes

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Patricia Verbiski

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Jerry Cooper

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Michelle Rhein

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan

Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Matthew Sullivan

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Christine Shotwell

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Cory Silver

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Rose Trackwell

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan

Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Amanda Walker

Gina Eason	

Dear Citrus County Staff,

I implore you to read the following and provide results and answers to the following test and questions, no later than June 16, 2026

Understanding what studies are needed, why they matter and what their supposed to tell us

If a large data center is proposed in a karst region, many hydrologists would ask:

1. Is the aquifer already stressed?
2. How much water will the facility use?
3. Will groundwater withdrawals lower nearby well levels?
4. Could reduced groundwater contribute to sinkhole formation?
5. Are cumulative impacts from future growth being considered?

Given current conditions, regulators and citizens are increasingly focused on whether large new water users could add pressure to already stressed groundwater systems. Florida water sources because growing demand and drought conditions.

For Citrus County Specifically

Since we're in Lecanto/Citrus County area, the key local concerns would be:

- Protection of the aquifer that supplies private wells and public water.

- Protection of spring systems such as those associated with the Crystal River and Homosassa Spring area
- Sinkhole susceptibility in the region's limestone geology.
- Whether any proposed project is located in a significant recharge area.

For a data-center proposal in Citrus County, I would strongly recommend request the following studies:

- A Detailed Hydrogeologic Study
- A Water Availability Analysis
- A Cone of Depression Model
- A Saltwater Intrusion Assessment
- A Sinkhole Susceptibility Review
- A Karst Vulnerability Assessment
- Groundwater Draw-Down Modeling
- Baseline well monitoring
- A Cumulative-Impact Statement

SWFWMD has the statutory authority, the monitoring data, and the modeling capability to do all of this. What has been missing so far is a formal request from Citrus County to make it a condition of rezoning consideration, not an afterthought during the permitting.

Other factors to consider are:

- Land clearing
- Habitat fragmentation
- Recharge area loss
- Stormwater runoff
- Sewer infrastructure impacts
- Construction impacts

- Diesel backup generators
- Noise
- Heat island effects
- Transmission infrastructure-capacity

The rezoning decision should evaluate all of those factors and the studies would provide a much clearer picture than simply looking at the project's direct footprint.

Based on the current Karst vulnerabilities growth, does the County know whether we can support a huge data center or any heavy industrial?

I would think it depends on the specific location, water demand, power demand, and design of the data center. A county-wide or statewide "yes" or "no" cannot be supported without details studies.

I ask you all whether a large, water-intensive data center raises legitimate concerns in a karst region such as much of Citrus County, and the answer should be, yes.

Here are some questions the County should require:

Geotechnical

1. Has a site-wide karst investigation been completed?
2. Have geophysical surveys been conducted?
3. Have borings identified voids or cavities?
4. Have cone penetration tests been completed?

Hydrogeologic

5. Will groundwater withdrawals occur?
6. What drawdown is anticipated?
7. Has induced sinkhole risk been evaluated?
8. Has an independent geologic review been performed?

Recommended Study Requirements

Before approval of any major data center development, consider requesting:

Phase I Karst Assessment

- Desktop geologic review
- LiDar Analysis
- Sinkhole Inventory
- Historical Sinkhole review

Phase II Subsurface Investigation

- Test borings
- CPT testing
- Geophysics
- Ground Penetrating radar where appropriate

Phase III Hydrogeologic Modeling

- Aquifer drawdown modeling
- Potentiometric surface analysis
- Sinkhole susceptibility assessment under pumping scenarios

Given the documented karst geology of Citrus County and the potential for significant groundwater demand associated with industrial development, we request a comprehensive sinkhole susceptibility review utilizing Florida Geological Survey, SWFWMD, LiDar, and site-specific geotechical data. The review should identify all known and potential karst features within at least a five-mile influence zone and evaluate whether future groundwater withdrawals could affect sinkhole risk.

This is a technically defensible request and is likely to receive serious consideration because it focuses on obtaining data rather that making unsupported claims.

The issue before the County is not whether economic development should occur. The question is whether the proposed rezoning and associated land-use changes provide

sufficient clarity, consistency, and enforceable standards to protect public resources and neighboring property owners.

Potential Legal Exposure

If the County approves this rezoning while significant ambiguities remain regarding environmental performance standards, groundwater impacts, noise impacts, and future industrial uses, Citrus County may create a situation in which both developers and citizens could challenge future County actions.

One one hand a developer could argue that the County granted development rights through rezoning and cannot later impose restrictions that were not clearly established during the approval process.

On the other hand, nearby residents and affected property owners may argue that the County failed to consistently apply or enforce it's own Comprehensive Plan policies, Holder Industrial Park standards, Land Development Code requirements, environmental protection provisions, and performance standards.

The result is a regulatory gray area that increases the risk of future litigation.

Florida law provides mechanisms for citizens who are "aggrieved or adversely affected" by a local government land-use decision to challenge actions that are inconsistent with the Comprehensive Plan or Land Development Code.

Environmental resources, groundwater protection, natural resources, public health, safety, and quality of life are recognized interests that may support such challenges when a citizen can demonstrate impacts beyond those experienced by the general public.

For this reason, it is critical that any approval clearly identify:

- Applicable environmental standards;

- Groundwater protection requirements;
- Noise performance standards;
- Stormwater management requirements;
- Karst and sinkhole protection measures;
- Traffic mitigation requirements; and
- Enforcement mechanisms

Holder Industrial Park and Industrial Uses

The County's industrial districts contemplate significant industrial activity but also recognize the need to protect surrounding residential, agricultural, and public uses from adverse impacts.

Industrial approvals should therefore be supported by objective evidence demonstrating that impacts can be adequately mitigated.

Where significant questions remain unanswered, additional studies should be and must be completed before approval rather than after rezoning approval.

RECOMMENDED ACTION

Prior to final approval, Citrus County should require:

1. Independent hydrogeologic reviewed.
2. Cone of depression groundwater remodeling.
3. Sinkhole susceptibility.
4. Comprehensive noise impact study.
5. Traffic impact analysis.
6. Wildlife and habitat assessments.
7. Cumulative infrastructure impact assessment.

8. Clear and enforceable performance standards.

Approving the rezoning before these questions are answered risks creating uncertainty for residents, decision-makers, and future applicants alike and puts the County at risk of a law suit due to lack of due diligence and negligence.

Holder Industrial Park - Proposed Data Center and or any Heavy Industrial Development to include both Phase 1 & Phase II

We request the studies and questions are answered by June 16, 2026

Citrus County, Florida

June 9, 2026

Executive Summary

I respectfully request that Citrus County delay any final approval of the proposed Holder Industrial Park and associated data center development until sufficient scientific, engineering, environmental, and infrastructure information has been provided to support an informed decision. Also, the costs of these tests and studies should not be passed onto the taxpayer, but rather Deltona Corporation.

Also, a CIP funded project like Holder Industrial Park could be subject to fraudulent environmental impact assessments, pushed through by a corrupt local government to generate tax revenue at the expense of residents' health and water quality. Citrus County residents must demand independent environmental impact assessments conducted by researchers who have no financial ties to development interests or local government.

A CIP is typically funded through bond issuance's (debt) or direct tax revenue. Funding an industrial park through these mechanisms would be a transfer of wealth from the citizenry to construction and corporate interests, creating a debt obligation that the public will be forced to pay even as the dollar devalues.

The following answers to the following questions and the results of This request is not intended to oppose development generally, Rather, it is intended to ensure that any decision made by Citrus County is based upon complete and reliable information, protects public health and safety, safeguards natural resources, and is consistent with the County's Comprehensive Plan and Land Development Code.

The proposed Development involves a large-scale industrial use within an environmentally sensitive region characterized by groundwater dependence, karst geology, aquifer recharge functions, and ongoing concerns regarding water availability.

At present, significant information appears to be absent from the public record.

Areas of Concern

1. Groundwater and Aquifer Protections

Residents have not been provided with evidence demonstrating:

- Groundwater drawdown impacts.
- Aquifer sustainability impacts.
- Effects on nearby private wells.
- Long-term water availability during drought conditions.
- Impacts to groundwater recharge functions.
- Cumulative impacts when combined with existing and future development.

Because Citrus County relies heavily upon groundwater resources, these issues should be evaluated before any major industrial rezoning is approved.

2. Karst Geology and Sinkhole Risk

The project area is located within a region known for karst geology.

Residents have not been provided with:

- Karst vulnerability assessments
- Sinkhole susceptibility evaluations
- Geotechnical investigations
- Analysis of subsurface conditions relevant to large-scale industrial construction.

Given the importance of protecting both public infrastructure and groundwater resources, these issues warrant further investigation.

3. Water Consumption Analysis

The applicant has submitted a conceptual comparison indicating that a data center may consume less water than theoretical residential build out under current zoning.

While useful as a planning comparison, this information alone does not address:

- Peak water demand.
- Drought-condition demand.
- Aquifer sustainability.
- Groundwater drawdown.
- Long-term cumulative impacts.
- Future expansion impacts.

Residents respectfully request a comprehensive water-resource evaluation.

4. Environmental Resource Assessment

Residents have not been provided with:

- Wildlife assessments
- Habitat evaluations
- Vegetation surveys
- Ecological impact analyses
- Environmental assessments identifying potential impacts to natural resources

These studies are important for understanding the full environmental consequences of the proposed development.

5. Cumulative Impact Analysis

The project should consider cumulative impacts resulting from:

- Existing residential growth.
- Existing industrial uses.
- Agricultural withdrawals.
- Existing groundwater demands.
- Regional water shortages.
- Future planned development.

Failure to consider cumulative impacts may have underestimate long-term consequences.

6. Infrastructure Capacity

Residents respectfully request documentation demonstrating that existing infrastructure can adequately support the proposed development, including:

- Water supply systems.
- Wastewater systems.
- Roadway Capacity.
- Emergency response services.
- Electrical infrastructure.

Questions for County Staff & Deputy Director of Growth Management

Prior to approval, residents respectfully request answers to the following question:

1. What scientific evidence supports the conclusion that groundwater resources will not be adversely affected?
2. What studies support the conclusion that sufficient water resources are available during drought conditions?

3. What evidence supports the conclusion that the project is compatible with surrounding land use?
4. What cumulative impact analyses have been performed?
5. What environmental assessments have been completed?
6. What studies support the conclusion that public infrastructure is adequate to support the proposed development?
7. What measures will be implemented to monitor and mitigate the impacts if unforeseen problems occur?

Requested Actions

Residents respectfully request that Citrus County:

1. Require a hydrogeologic impact studying
2. Require a groundwater sustainability analysis.
3. Require a cumulative impact assessment.
4. Require a karst vulnerability evaluation.
5. Require environmental resources assessments.
6. Require infrastructure-capacity analyses.
7. Require public disclosure of all technical studies before any final decision.
8. Require independent review of critical environmental and water-resource analyses.

Economic Development Narratives Versus Real-World Outcomes

The economic arguments presented to justify the rezoning to Heavy Industrial with a 50-megawatt peak demand allowance typically center on job creation, tax base expansion, and regional competitiveness. However, the available evidence suggests that these promises often fail to materialize at the scale advertised. Heavy industrial facilities operating at this energy threshold tend to be highly automated, requiring

relatively few permanent workers per megawatt of capacity. A data center requiring 50 megawatts, for example, may employ only 50 to 100 full-time workers, while a chemical processing plant at the same energy level might employ 200 to 300 workers—far fewer than the thousands of jobs often promised during rezoning hearings. The article context provides specific case studies where communities that approved Heavy Industrial rezoning for large energy consumers experienced increased property taxes for adjacent homeowners without proportional increases in local employment or economic multiplier effects, as the tax incentives granted to attract these facilities often offset any revenue gains for decades.

Conclusion

The proposed Holder Industrial Park represents a significant land-use decision with potentially long-lasting impacts on Citrus County's water resources, environment, infrastructure, and quality of life.

Residents respectfully request that no final approval be granted until sufficient scientific, engineering, and environmental information has been provided to allow an informed and defensible decision.

Responsible growth requires informed decision-making. Additional study and review are prudent, reasonable, and in the best interests of the citizens of Citrus County.

Respectfully submitted,

Delores Wray

[EXTERNAL]Opposition to the Proposed Rezoning for an Industrial Park in Holder

From Vickie Boeshans <turboaldro@yahoo.com>
Date Mon 6/15/2026 7:33 PM
To Joanna L. Coutu <joanna.coutu@citruscounty.gov>

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

Dear Commissioner,

I am writing to express my strong opposition to the proposed rezoning of land in Holder for an industrial park.

My opposition is not to economic development itself, but to the conversion of rural land into industrial use in an area that is valued for its natural resources, environmental sensitivity, and rural character. The proposed rezoning represents a significant change in land use that could have lasting consequences for our community and future generations.

One of my greatest concerns is the potential impact on Citrus County's water resources. Our county depends on a delicate network of groundwater, wetlands, springs, and the Floridan aquifer. Rezoning land for industrial development increases the likelihood of extensive land clearing, additional impervious surfaces, increased stormwater runoff, and potential contamination risks. While studies may attempt to predict impacts, the long-term effects on our water resources remain uncertain and may not become apparent for many years.

I am also concerned about the precedent this rezoning would set. Holder has historically maintained a rural character that reflects the values and identity of the Nature Coast. Approving industrial zoning in this area opens the door for additional industrial expansion and further conversion of natural lands. What may begin as one industrial park could lead to future requests for additional industrial development, gradually transforming the area in ways that cannot be reversed.

Citrus County's designation as part of Florida's Nature Coast is one of its greatest assets. Residents choose to live here because of the open spaces, wildlife, natural beauty, and quality of life that distinguish our county from more heavily developed regions of the state. Once land is rezoned and developed for industrial purposes, those natural characteristics are permanently altered.

I am particularly troubled by the unknown long-term consequences of this rezoning. Environmental impacts often occur gradually and can take years or decades to fully understand. Decisions made today could affect groundwater quality, wildlife habitat, and the overall character of our community long after current decision-makers are gone.

Economic opportunities can be created in many locations. However, once natural landscapes are lost and environmentally sensitive areas are altered, they cannot be restored to their original condition. Growth should be directed toward areas already designated and planned for industrial development rather than requiring the rezoning of rural land that contributes to the environmental health and identity of our county.

I respectfully urge the Board to deny this rezoning request and to protect the environmental resources, water quality, and rural character that make Holder and Citrus County unique. The long-term preservation of our natural heritage should take precedence over short-term development interests.

Thank you for your consideration and for your service to the citizens of Citrus County.

Respectfully,

Vickie Boeshans

[EXTERNAL]Deltona Holder Industrial Park Rezoning Applications/Requests - RE: CPA-2025-00012 and CPA/AA-2025-00013/CPA/AA/PUD2025-00013

From John Price <nitehawk48@gmail.com>
Date Mon 6/15/2026 10:24 PM
To Reese M. Bilby <Reese.bilby@citruscounty.gov>; Joanna L. Coutu <joanna.coutu@citruscounty.gov>; comments <Comments@citruscounty.gov>

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To: Citrus County Planning and Development Commission

It is with respect for the tasks you perform to protect the best interests of the citizens of Citrus County and to insure the highest and best use of the land and resources of our beautiful home that I write today to make known to the PDC my emphatic opposition to granting Deltona any application to rezone Holder Industrial Park to allow a hyperscale or even a mid level data center. Holder Industrial Park was designed to be a light industrial use area and it should continue to be light industrial into the future.

The list of reasons for my opposition are too many to enumerate in this request in any sort of detail. However, in general, my greatest concerns are as follows:

1) The unanswered questions about the many areas of impact a hyperscale data center would have on Citrus County are voluminous. For this reason alone, this rezoning should be denied full stop.

2) I certainly hope I'm wrong about this, but I do not believe any of the PDC members or the BOCC members are well informed enough on scientific and technical matters relating to data centers and their impact on the communities where they were built to make a decision on this matter. If this rezoning were to be approved, it should only be done after a disinterested third party professional scientific and technical impact study be done over an extended period of time to determine the effects a hyperscale data center would have, long term, on the Floridan Aquifer, the Citrus County economy, quality of life, wildlife habitat, electric rates/infrastructure and who pays for it, real estate values, noise pollution, water well pollution potential and any other areas of importance to our lives and our investment in living in Citrus County.

3) Other than some admittedly significant tax revenue and relatively few local initial buildout construction jobs, I see no general benefit to the citizens of Citrus County of having a large data center here. Tax revenue will continue to grow due to the general growth pattern we are seeing even if the property tax abatement amendment passes in the upcoming election cycle. The permanent jobs will mostly go to specialists who come here from elsewhere or to others who perform their jobs remotely.

Generally, the experience of other areas where these facilities have been built, has been only 12 to 20 local jobs were created once the center was operating.

4) Who pays for the cost of decommissioning the facility after its useful life ends? This could be a major financial headache for Citrus County only 10 or 12 years down the road.

5) The most important question of all is the long term threat to our water supply. The Floridan Aquifer is currently under duress with drawdown and salt water intrusion already a problem in some areas in some counties due to development and population increases. We must do everything possible to protect our water supply and having a hyperscale data center is one of the worst choices we could possibly make due to their consumption of vast amounts of water 24/7/365.

Please vote no on the Deltona Corporation Holder Industrial Park rezoning to protect Citrus County and the best interests of its citizens for now and into the future.

Respectfully,

John R Price
Concerned Citrus County Citizen

Re: Comment for June 18, 2026 Hearing re Applications CPA-2025-00012 and CPA/AA-2025-00013 / CPA/AA/PUD2025-00013 re: Deltona Holder Industrial Park Rezoning Request

joanna.coutu@citruscounty.gov
Comments@citruscounty.gov
Reese.bilby@citruscounty.gov

TO: CITRUS COUNTY PLANNING AND DEVELOPMENT COMMISSION PANEL

Dear PDC Panel;

Below is info for your consideration from the Federal level regarding the dangers and "side effects" of hyperscale data centers to nearby residents. Deltona's present rezoning request certainly would not provide enough of a "comfort zone" to cushion hundreds of Citrus County residents (including children attending nearby schools), to warrant approval:

" Robert F. Kennedy Jr., serving as the Secretary of the Department of Health and Human Services (HHS), has issued strong warnings regarding the unchecked expansion of AI data centers, citing potential "grave injuries" and public health risks.

Public Health and Environmental Concerns

Kennedy has raised explicit alarms regarding how massive digital facilities affect nearby communities, pointing to several distinct variables:

Electromagnetic Fields (EMF): Kennedy's primary stated concern relates to long-term exposure to electromagnetic radiation from data center emissions and nearby cell towers. He has cited studies connecting these exposures to increased risks of cancer and neurological disorders.

Neurological Risks: In congressional testimony and public forums, he has stated that the constant decibel noise and radiation from data infrastructure could trigger headaches, vertigo, migraines, and "grave neurological injuries".

Resource Strain & Air Pollution: He has noted that data center energy consumption and industrial emissions (such as nitrogen dioxide) strain local utility grids and may degrade regional air and water quality."

I hope Citrus County will prioritize the health and well being of its residents when considering any rezoning for HIP.
The real health risks are just another severe "hazard", besides the risks to Citrus County's very aquifer and power grid. Deltona's rezoning application ignores and/or provides no remedies for the real dangers it will put upon your fellow Citrus County residents. Accordingly, in order to properly serve Citrus County residents, the PDC must do the right thing and VOTE NO on Deltona's rezoning request for the HIP.

Thank you, in advance, for your consideration.

Regards,

Frank Ardillo

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Kristine Ramos

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Diane Gallant

[EXTERNAL]Holder Industrial Park Expansion and Rezoning Applications: Deltona Corp. – CPA-2025-00012 and CPA/AA-2025-00013

From J Royer <jroyer2@hotmail.com>
Date Mon 6/15/2026 2:32 PM
To Joanna L. Coutu <joanna.coutu@citruscounty.gov>

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

Dear Joanna Coutu,

Please file the following request with Citrus County records.

Request to deny the applications by Deltona Corporation seeking a comprehensive plan amendment for expansion and rezoning to HEAVY INDUSTRIAL at the Holder Industrial Park. The applications are not in line with the county's Comprehensive Plan.
Citrus County Comprehensive Plan
CHAPTER 10 LAND USE
GOALS, OBJECTIVES, AND POLICIES
GOAL #17
The Future Land Use Plan is intended to enhance the quality of life of the citizens of Citrus County through: provisions for adequate housing, services, and facilities; protection of the environment; creation of favorable economic conditions; and the elimination of incompatible land uses, hazards, and nuisances.

The rezoning to HEAVY INDUSTRIAL would allow a data center and a variety of other polluting industries. Citizens of Citrus County do not want HEAVY INDUSTRIAL industries in the county due to the impacts on human health, environment, power utilities, land, and public infrastructure. The rezoning would place undue burdens on nearby residents such as quality of life, water and air pollution, loss of habitat for wildlife, and loss of property values.

I have been a lifelong resident of Citrus County. I grew up and live in the unincorporated town of Holder within a half mile of the Holder Industrial Park and would be significantly impacted. I enjoy the peace of rural living with wildlife in the area. I see deer, wild turkeys, a variety of birds, and other small animals in my yard. Rezoning of the Holder Industrial Park to Heavy Industrial would be devastating to the health and well-being of residents in nearby neighborhoods and the wildlife in the area. Our neighborhoods and schools will be subjected to a 24/7 high frequency (DBA) noise and low-frequency (DBC) vibrations, massive light pollution, and environmental pollution of our air and water. There are three local schools within a few miles of Holder Industrial Park serving nearly 1,800 children that would be affected.

CHAPTER 4 COASTAL, LAKES, AND RIVER MANAGEMENT

VI. GOALS, OBJECTIVES, AND POLICIES
GOAL #4
Preserve, protect, and enhance resources of the Coastal, Lakes, and River Areas and where appropriate, restrict development activities which would damage or destroy these resources, protect human life, and limit the public expenditure in areas subject to natural disasters.

Two Mile Prairie Tract, the Withlacoochee River, and Tsala Apopka Chain of Lakes are nearby. These areas, known as the "Cove of the Withlacoochee", are all interconnected by canals, tributaries and wetlands and would be greatly affected by this industrial development.

Deltona's presentation predicts around 2,500 construction jobs, 825 company jobs and $105 million in property tax revenue. In reality, data centers do not hire locals for construction or operations. The majority of construction jobs are done by specialized workers from outside the county and state. Once a center is operational, a minimal staff is required for maintenance and security. There are minimal opportunities for long term jobs for locals. In addition, Deltona Corporation cited a useful operational lifespan of just 10 years for a data center with zero legal assurances for who cleans up the abandoned electronic wasteland when the technology becomes obsolete. The taxpayers of Citrus County will be stuck with a Superfund site. The Planning and Development Commission and the BOCC must look past the empty promises of jobs and nominal tax revenue.

I urge the Planning and Development Commission to recommend a total denial of the Deltona rezoning on June 18. There are no long term benefits for citizens of Citrus County. It is extremely important to weigh the costs verses benefits of rezoning. The only benefit for Citrus County is a temporary tax base at the expense of the health, safety, and well-being of its citizens and the environment. NO REZONING TO HEAVY INDUSTRIAL.

Sincerely,

Julie Royer
7102 N Smith Terrace
Holder, FL. 34445

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Rene May

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, KRISTEN CYR

To the Citrus County Planning and Development Commission,

I am a resident of Citrus County writing to formally oppose applications GPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Becca Austin

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Dave McKee

Subject: [EXTERNAL]No Rezoning-Stop the Data Center in Citrus County - CPA-2025-00012 and CPA/AA-2025-00013

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Chrissy Barnes

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Evelyn Martinez

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Beverly Joyer

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Julie Smither

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Heather McClusky

Can Citrus County Benefit From An AI Data Center?

As controversial as an AI data center seems to be I believe that one and only one reasonable site exists in this county. By examining what all parties want and finding a solution that gets us there without undue hysteria the county can satisfy all but the most polarized elements.

What the people want.

From numerous comments at public meetings the great majority of the people want any AI center to be far away from them. Complaints of noise, light, dust, vibration, unsightliness and proximity to AI disappear with distance. Perceptions of future expansion and its attendant anxiety decrease as well with distance.

What the purveyors of AI want.

Obviously great long term profits can be had by those who own/control an AI center. These entities seem to feel that time is of the essence, do it now before the bubble bursts. The current nature of AI is huge computational/collating power coupled with the seeming sorcery of 'algorithms'. The strain this imposes on resources like electric power generation, excessive heat production requiring cooling, and vast land areas to accommodate equipment and buildings are prohibitive in most cases. Some projects come with NDA's that leave the public ill at ease. This is a hard sell.

What the county needs to do.

Find a balance that quiets disagreement between the parties that is also beneficial to the entire county.

Proposal: Place all AI development in the NW corner of the county on or near the Duke Energy complex.

From the standpoint of distance to populated areas and availability of required resources for AI data centers there is no better location. The existing usage of the area has created an industrial complex in an environmentally sensitive region for over fifty years with no great dislocation to the county.

The "heat island" already exists. The noise, light, dust, etc. already exists. The copious power and water availability already exists. Little of consequence remains except negotiations between involved parties/factions on terms of usage.

The current generating capacity is measured in gigawatts. The currently used water for this capacity is measured in mega gallons/day. The surrounding surface area for about three miles in any direction is oceanic or large parcel extractive/ conservation lands. The addition of a 100-200 megawatt AI center is almost a blip on the radar.

The county as a good steward for its residents should consider the following:

A: The decommissioned nuclear power plant will likely prove desired by the AI purveyors and might be restored for a share of the power generated. The tax revenue from a functional nuclear power plant would be substantial. If the north and south channels are used for cooling waters for an AI, no aquifer usage of cooling water would be needed and the manatees stay warm.

B: The use of natural waters could generate tax revenue if properly balanced with the thermodynamics of operating large industrial entities. Some minor tax (perhaps 1-3 cents per gallon for continuous aquifer withdrawal) may serve the county as a constraint on growth if needed.

C: If a continuous loop or similar system is used for cooling that does not require huge volumes of potable water the county could consider sending treated sewage to the AI facility in similar fashion to the existing power plant usage with little or no tax as an alternative.

With the possibilities of a rehabilitated nuclear plant serving potentially 1/3 of the state, potential county tax revenues, and sewage disposal on a grand scale this proposal begs the county for serious consideration.

WARNING: This email originated from an external Domain **DO NOT CLICK** unless you recognize the sender and know the content is safe.

Dear Officials,

I am a concerned resident of Citrus County, one of many who sees the potential harm that a data center can cause in our area.

I hope that you will oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which would amend our Comprehensive Plan and allow for heavy industrial use in northern Citrus County.

If you approve the proposed rezoning, we can never go back. Northern Citrus County, and our entire county, will be permanently altered, with who-knows how many other industries. It isn't clear how these industries could be further limited. The amount of electrity allowed, water withdrawn from our aquifer, and levels of noise may be beyond our ability to further govern.

There is so much unknown, that to proceed now by allowing rezoning, is a mistake.

As you know, Citrus is not the only county with residents resisting data centers. This has become an issue that crosses party lines, because we are united in our concerns for our homes, and the community and natural resources that we love.

We entrust you with the health and welfare of our communities and resources.

Please, say NO to data centers, beginning with the June 18th meeting.

Sincerely,

Rosemary Nilles

[EXTERNAL]Long range implications of rezoning - Please don't recommend

From Christie Thompson <littlechristie8@yahoo.com>
Date Tue 6/16/2026 10:56 AM
To Joanna L. Coutu <joanna.coutu@citruscounty.gov>

WARNING: This email originated from an external Domain DO NOT CLICK unless you recognize the sender and know the content is safe.

Dear Planning and Development Commission Members,

Thank you for your hard work and effort to make Citrus County the best it can be!

I understand that you are facing monumental decisions about rezoning areas of the county for heavy industrial use that could have substantial economic and environmental impacts for us all and that you must weigh the trade off carefully.

I recognize that there are many different perspectives on this issue, but the one thing we all have in common is a need for clean water just to survive. I hope you will put that issue above all others.

My greatest concerns about rezoning for heavy industrial use, especially for data centers, are:

1) How much water is required initially?

2) How much needs to be replaced due to evaporative cooling or flushing?

3) What are the actual risks of contaminating or depleting our water supplies?

4) Could groundwater levels get low enough to increase sinkholes in our fragile karst limestone topography?

We all remember the man who was swallowed alive when the ground opened up underneath his bed. Florida is the only state that is almost entirely karst limestone bedrock. The risk of sinkholes, salt water intrusion into a low aquifer, and depleted wells, make it imperative that we act with caution and protect the levels of our most vital water resources.

I don't envy the pressure you must feel on all sides about this.

I know you live in this county too, and I know you need clean water and peace to enjoy life in our beautiful county as much as we do.

So I beg you to fight with us to preserve life as we know it, and not take a chance that someone who

doesn't love us or our county could come in and permanently alter our lives, our health, our land or our access to clean drinking water.

I don't think any amount of money, infrastructure, or even job creation could be worth the potential downsides of converting any land in Citrus County to heavy industrial use or any use that could compromise the future of our access to clean water.

I am asking you to respectfully recommend a denial of the Holder Industrial Park expansion applications CPA-2025-00012 and CPA-AA-2025-00013 on June 18, 2026.

Thank you for your time and your effort to protect the people of this county.

Respectfully,
Christie Thompson
Citrus County resident

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid

upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Donna Lizzo

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Angela Cernich

To the Citrus County Planning and Development Commission,

I am writing to formally oppose applications CPA-2025-00012 and CPA/AA-2025-00013, which propose a Comprehensive Plan Amendment and rezoning to Heavy Industrial use in the Holder/Lecanto area.

My comments are as follows:

1. This rezoning enables high-impact development without enforceable limits. Once Heavy Industrial zoning is approved, large-scale facilities including data centers may proceed by right — with limited future public oversight. At the current stage, there are no defined limits on electrical demand, water withdrawal, or noise levels. Without these protections, approval transfers significant risk to the community.

2. The land use change is permanent. Converting 800+ acres of rural land to Heavy Industrial use is effectively irreversible. This zoning permits a wide range of industrial activities beyond what is currently presented, permanently altering the character of this community.

3. Infrastructure impacts are unquantified. Data centers are among the most resource-intensive uses in existence. Without a defined plan for grid upgrades, water impact assessment, and noise modeling, the county is being asked to approve a project with unknown community-wide consequences.

I respectfully request that these applications, and all plans for large-scale Data Center development be denied.

Thank you for your consideration.

Sincerely, Allison Minjares

Subject: Clarification Regarding Data Centers and the Tampa Bay Regional Planning Council

Dear Citrus County Residents,

I hope this message finds you well. I am writing to provide clarification regarding the role of the Tampa Bay Regional Planning Council (TBRPC).

TBRPC is a regional planning agency that provides technical assistance, coordination, and advisory support to local governments across the Tampa Bay region. Importantly, TBRPC is not a regulatory body and does not have authority to approve, deny, or enforce local development decisions.

Decisions regarding land use, zoning, and projects such as data centers within Citrus County are made solely by the Citrus County Board of County Commissioners in accordance with local ordinances and public processes. TBRPC does not participate in or influence these determinations.

We remain committed to supporting regional collaboration and providing objective planning resources that assist our member governments and communities.

If you have questions about specific projects or decisions in Citrus County, we encourage you to contact Citrus County directly for the most accurate and up-to-date information.

Thank you for your time and for your engagement in your community.

Kind regards,

Wren G. Krahl, CP-PHR
Executive Director

Subject: NO DATA CENTERs

You don't often get email from scott@eventallc.com. Learn why this is important

CAUTION: Sender of this message is outside of the organization.

Good morning
Im requesting my comments to be added to attached as public record for the May 26, 2026 Agenda item I.4.

I am writing to express my fierce and uncompromising opposition to the proposed development of a data center anywhere comprised of THE NATURES COAST (which includes Wakulla, Jefferson, Taylor, Dixie, Levy, **Citrus**, Hernando, and Pasco counties).
. This project represents a catastrophic threat to our communitys identity, and the fragile natural resources that we are legally and morally obligated to protect. We have to stop the exploitation and destruction of our irreplaceable natural ecosystem before it is too late.

The Natures Coast is world-renowned for its pristine springs, vital marine habitats, and unique wildlife, including the already abused manatee. Data centers are notoriously massive consumers of both water and energy. Operating a industrial-scale facility here will require millions of gallons of water daily to cool high-density computer servers. Pumping this water from our aquifer will deplete water levels, fuel toxic algae blooms, and permanently degrade the springs that drive our eco-tourism economy.

Furthermore, the continuous, high-volume energy demands of a data center run entirely counter to the preservation of our environment. The accompanying noise pollution, massive physical footprint, and heavy infrastructure requirements will shatter the rural charm and peace of our community
Our natural resources are not infinite commodities **to be sold** to the highest tech bidder. Once our springs are dried, our wildlife displaced, and our landscape industrialized, they can never be recovered.
I urge the Board to stand with the residents of these Counties, prioritize ecological preservation over corporate industrialization, and deny all zoning changes, permits, and variances for this data center. We demand that you protect its future.
